# Digital Indicating pH Meter

# AER-102-PH

## Instruction Manual

**Shinko**

# Preface

Thank you for purchasing our AER-102-PH, Digital Indicating pH Meter.

This manual contains instructions for the mounting, functions, operations and notes when operating the AER-102-PH. To ensure safe and correct use, thoroughly read and understand this manual before using this instrument.

To prevent accidents arising from the misuse of this instrument, please ensure the operator receives this manual.

## Characters Used in This Manual

| Indication | ᴓ | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | C | F |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Number, ℃/℉ | -1 | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | ℃ | ℉ |
| Indication | A | b | c | d | E | F | G | H | I | J | K | L | M |
| Alphabet | A | B | C | D | E | F | G | H | I | J | K | L | M |
| Indication | N | o | P | Q | R | S | T | U | V | W | X | Y | Z |
| Alphabet | N | O | P | Q | R | S | T | U | V | W | X | Y | Z |

# ⚠ Caution

• This instrument should be used in accordance with the specifications described in the manual. If it is not used according to the specifications, it may malfunction or cause a fire.

• Be sure to follow all of the warnings, cautions and notices. If they are not observed, serious injury or malfunction may occur.

• The contents of this instruction manual are subject to change without notice.

• Care has been taken to ensure that the contents of this instruction manual are correct, but if there are any doubts, mistakes or questions, please inform our sales department.

• This instrument is designed to be installed through a control panel. If it is not, measures must be taken to ensure that the operator cannot touch power terminals or other high voltage sections.

• Any unauthorized transfer or copying of this document, in part or in whole, is prohibited.

• Shinko Technos Co., Ltd. is not liable for any damage or secondary damage(s) incurred as a result of using this product, including any indirect damage.

# Safety Precautions (Be sure to read these precautions before using our products.)

The safety precautions are classified into 2 categories: "Warning" and "Caution".

Depending on the circumstances, procedures indicated by ⚠ Caution may result in serious consequences, so be sure to follow the directions for usage.

⚠ **Warning** Procedures which may lead to dangerous conditions and cause death or serious injury, if not carried out properly.

⚠ **Caution** Procedures which may lead to dangerous conditions and cause superficial to medium injury or physical damage or may degrade or damage the product, if not carried out properly.

---

## ⚠ Warning

- To prevent an electrical shock or fire, only Shinko or other qualified service personnel may handle the inner assembly.
- To prevent an electrical shock, fire or damage to the instrument, parts replacement may only be undertaken by Shinko or other qualified service personnel.

## ⚠ SAFETY PRECAUTIONS

- To ensure safe and correct use, thoroughly read and understand this manual before using this instrument.
- This instrument is intended to be used for measuring equipment.
  Verify correct usage after purpose-of-use consultation with our agency or main office.
  (Never use this instrument for medical purposes with which human lives are involved.)
- Proper periodic maintenance is also required.
- This instrument must be used under the conditions and environment described in this manual. Shinko Technos Co., Ltd. does not accept liability for any injury, loss of life or damage occurring due to the instrument being used under conditions not otherwise stated in this manual.

## ⚠ Caution with Respect to Export Trade Control Ordinance

To avoid this instrument from being used as a component in, or as being utilized in the manufacture of weapons of mass destruction (i.e. military applications, military equipment, etc.), please investigate the end users and the final use of this instrument. In the case of resale, ensure that this instrument is not illegally exported.

# 1. Installation Precautions

> ## ⚠ Caution
>
> This instrument is intended to be used under the following environmental conditions (IEC61010-1): Overvoltage category Ⅱ, Pollution degree 2
> Ensure the mounting location corresponds to the following conditions:
> - A minimum of dust, and an absence of corrosive gases
> - No flammable, explosive gases
> - No mechanical vibrations or shocks
> - No exposure to direct sunlight, an ambient temperature of 0 to 50℃ (32 to 122℉) that does not change rapidly, and no icing
> - An ambient non-condensing humidity of 35 to 85 %RH
> - No large capacity electromagnetic switches or cables through which large current is flowing.
> - No water, oil, chemicals or the vapors of these substances can come into direct contact with the unit.
> - If the AER-102-PH is mounted through the face of a control panel, the ambient temperature of the unit – not the ambient temperature of the control panel – must be kept under 50℃. Otherwise the life of electronic parts (especially electrolytic capacitors) of the unit will be shortened.
>
> **Note**: **Do not install this instrument on or near flammable material even though the case of this instrument is made of flame-resistant resin.**

# 2. Wiring Precautions

> ## ⚠ Caution
>
> - Do not leave wire remnants in the instrument, as they could cause a fire or a malfunction.
> - Use a solderless terminal with an insulation sleeve in which the M3 screw fits when wiring the AER-102-PH.
> - The terminal block of this instrument is designed to be wired from the left side. The lead wire must be inserted from the left side of the terminal, and fastened with the terminal screw.
> - Tighten the terminal screw using the specified torque. If excessive force is applied to the screw when tightening, the terminal screw or the case may be damaged.
> - This instrument does not have a built-in power switch, circuit breaker and fuse. It is necessary to install a power switch, circuit breaker and fuse near the instrument. (Recommended fuse: Time-lag fuse, rated voltage 250 V AC, rated current 2 A)
> - For a 24 V AC/DC power source, do not confuse polarity when using direct current (DC).
> - Be sure to connect the ground terminal to earth for safety (D-class grounding). Keep the grounding of this unit separate from other electrical devices, such as motors.
> - Do not apply a commercial power source to the sensor which is connected to the input terminal nor allow the power source to come into contact with the sensor.
> - Use the pH Combined Electrode Sensor in accordance with the sensor input specifications of the AER-102-PH.
> - Keep the input wires and power lines separate.

**Note about the pH Combined Electrode Sensor Cable**

The pH Combined Electrode Sensor cable is a highly-insulated (electrical) cable.
Please handle it with utmost care as follows.

• Do not allow terminals and socket of the pH Combined Electrode Sensor cable to come in contact with moisture or oil of any kind. Likewise, ensure fingers are clean, otherwise the insulation will deteriorate, resulting in unstable indication.
Be sure to keep the cable dry and clean at all times.
If the cable is stained, clean it with alcohol, and dry it completely.

• For calibration or electrode checking/replacement, the pH Combined Electrode Sensor cable should be wired with sufficient length.

• Keep the pH Combined Electrode Sensor cable and junction cable away from electrical devices, such as motors or their power lines from which inductive interference emanates.

**Connection**

The pH Combined Electrode Sensor cable has the following terminals:

| Code | Terminal |
|------|----------|
| G | Glass electrode terminal |
| R | Reference electrode terminal |
| T, T | Temperature compensation electrode terminals (Cu500) |
| A, B | Temperature compensation electrode terminals [Pt100 (2-wire), Pt1000] |
| A, B, B | Temperature compensation electrode terminals [Pt100 (3-wire)] |
| E | Shield wire terminal |

For the pH Combined Electrode Sensor with No Temperature Compensation, T, T or A, B, B cables are not available.
E cables are available depending on the sensor type.

# 3. Operation and Maintenance Precautions

# ⚠ Caution

• Do not touch live terminals. This may cause an electrical shock or problems in operation.

• Turn the power supply to the instrument OFF when retightening the terminal or cleaning.
Working on or touching the terminal with the power switched ON may result in severe injury or death due to electrical shock.

• Use a soft, dry cloth when cleaning the instrument.
(Alcohol based substances may tarnish or deface the unit.)

• As the display section is vulnerable, be careful not to put pressure on, scratch or strike it with a hard object.

# Contents

# 1. Model

## 1.1 Model

| AER-10 | 2- | PH | | ,☐☐☐ | | | |
|--------|-----|-----|-----|------|-----|-----|-----|
| Input Points | 2 | | | | 2 points | | |
| Input | | PH | | | pH Combined Electrode Sensor | Pt spec (*1) | Pt1000 |
| | | | | | | | Pt100 |
| | | | | | | Cu spec (*1) | Cu500/25℃ |
| Power Supply Voltage | | | | | 100 to 240 V AC (standard) | | |
| | | | 1 | | 24 V AC/DC(*2) | | |
| Option | | | | C5 | Serial communication RS-485 | | |
| | | | | EVT3 | EVT3, EVT4 outputs (Contact output 3, 4) | | |
| | | | | TA2 | Transmission output 2 (*3) | | |

(*1) This input temperature specification was specified at the time of ordering.
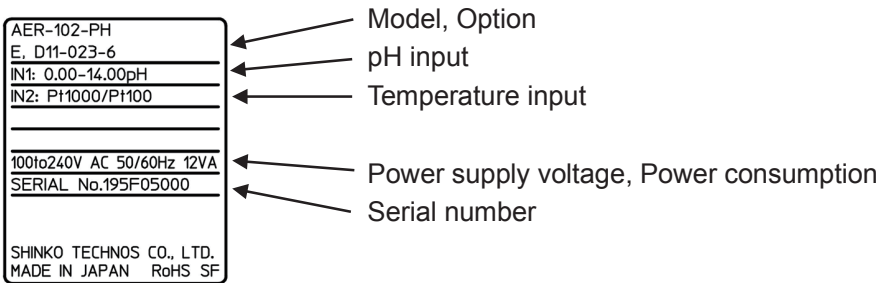

(*2) Power supply voltage 100 to 240 V AC is standard.

When ordering 24 V AC/DC, enter "1" in Power supply voltage, after 'PH'.

(*3) If Transmission output 2 (TA2 option) is ordered, the EVT1 cannot be added.
## 1.2 How to Read the Model Label

The model label is attached to the left side of the case.

Model, Option

# 2. Names and Functions of Sections

(Fig. 2-1)

**Displays**

| pH Display | pH or characters in setting mode are indicated in red/green/orange. Indications differ depending on the selections in [Backlight selection (p.37)] and [pH color (p.38)]. |
|---|---|
| Temperature Display | Temperature or values in setting mode are indicated in green. Indications differ depending on the selections in [Backlight selection (p.37)]. |
| Output Display | Backlight green The bar graph lights up corresponding to the Transmission output. Indications differ depending on the selections in [Bar graph indication (p.39)]. |

**Action Indicators:** Backlight orange

| EVT1 | Lights up when EVT1 output (Contact output 1) is ON. |
|---|---|
| EVT2 | Lights up when EVT2 output (Contact output 2) is ON. |
| EVT3 | Lights up when EVT3 output (Contact output 3) (EVT3 option) is ON. |
| EVT4 | Lights up when EVT4 output (Contact output 4) (EVT3 option) is ON. |
| T/R | Lights up during Serial communication (C5 option) TX output (transmitting). |
| LOCK | Lights up when Lock 1, Lock 2 or Lock 3 is selected. |

**Keys**

| △ | UP key | Increases the numeric value. |
|---|---|---|
| ▽ | DOWN key | Decreases the numeric value. |
| MODE | MODE key | Selects a group. |
| SET | SET key | Switches the setting modes, and registers the set value. |

# 3. Mounting to the Control Panel

## 3.1 Site Selection

> ### ⚠ Caution
>
> Use within the following temperature and humidity ranges:
>  Temperature: 0 to 50℃ (32 to 122℉) (No icing)
>  Humidity: 35 to 85 %RH (Non-condensing)
> If AER-102-PH is mounted through the face of a control panel, the ambient temperature of the unit – not the ambient temperature of the control panel – must be kept under 50℃, otherwise the life of electronic parts (especially electrolytic capacitors) of the unit will be shortened.

**This instrument is intended to be used under the following environmental conditions** (IEC61010-1): Overvoltage category Ⅱ, Pollution degree 2

**Ensure the mounting location corresponds to the following conditions:**
 • A minimum of dust, and an absence of corrosive gases
 • No flammable, explosive gases
 • No mechanical vibrations or shocks
 • No exposure to direct sunlight, an ambient temperature of 0 to 50℃ (32 to 122℉) that does not change rapidly
 • An ambient non-condensing humidity of 35 to 85 %RH
 • No large capacity electromagnetic switches or cables through which large current is flowing
 • No water, oil, chemicals or the vapors of these substances can come into direct contact with the unit
## 3.2 External Dimensions (Scale: mm)

(Fig. 3.2-1)

**3.3 Panel Cutout (Scale: mm)**

> ## ⚠ Caution
>
> If horizontal close mounting is used for the unit, IP66 specification (Drip-proof/ Dust-proof) may be compromised, and all warranties will be invalidated.

$92^{+0.8}_{0}$

$92^{+0.8}_{0}$

$45^{+0.5}_{0}$

$n \times 48\text{-}3 \ ^{+0.5}_{0}$

Horizontal close mounting
n: Number of mounted units

(Fig. 3.3-1)

**3.4 Mounting and Removal**

> ## ⚠ Caution
>
> **As the case is made of resin, do not use excessive force while screwing in the mounting bracket, or the case or mounting brackets could be damaged. The tightening torque should be 0.12 N•m.**

### How to mount the unit
Mount the unit vertically to the flat, rigid panel to ensure it adheres to the Drip-proof/ Dust-proof specification (IP66).

Mountable panel thickness: 1 to 8 mm

(1) Insert the unit from the front side of the panel.

(2) Attach the mounting brackets by the holes at the top and bottom of the case, and secure the unit in place with the screws.

### How to remove the unit
(1) Turn the power to the unit OFF, and disconnect all wires before removing the unit.

(2) Loosen the screws of the mounting brackets, and remove the mounting brackets.

(3) Pull the unit out from the front of the panel.

UP
(Fig. 3.4-1)

# 4. Wiring

## ⚠ Warning

**Turn the power supply to the instrument off before wiring or checking.**
**Working on or touching the terminal with the power switched on may result in**
**severe injury or death due to electrical shock.**

## ⚠ Caution

• Do not leave wire remnants in the instrument, as they could cause a fire or a
  malfunction.
• Use a solderless terminal with an insulation sleeve in which the M3 screw fits when
  wiring the AER-102-PH.
• The terminal block of this instrument is designed to be wired from the left side. The
  lead wire must be inserted from the left side of the terminal, and fastened with the
  terminal screw.
• Tighten the terminal screw using the specified torque. If excessive force is applied to
  the screw when tightening, the terminal screw may be damaged.
• This instrument does not have a built-in power switch, circuit breaker and fuse.
  It is necessary to install a power switch, circuit breaker and fuse near the instrument.
  (Recommended fuse: Time-lag fuse, rated voltage 250 V AC, rated current 2 A)
• For a 24 V AC/DC power source, do not confuse polarity when using direct current (DC).
• Be sure to connect the ground terminal to earth for safety (D-class grounding).
  Keep the grounding of this unit separate from other electrical devices, such as motors.
• Do not apply a commercial power source to the sensor which is connected to the input
  terminal nor allow the power source to come into contact with the sensor.
• Use the pH Combined Electrode Sensor in accordance with the sensor input
  specifications of this unit.
• Keep the input wires and power line separate.

**Note about the pH Combined Electrode Sensor Cable**
  The pH Combined Electrode Sensor cable is a highly-insulated (electrical) cable.
  Please handle it with utmost care as follows.
• Do not allow terminals and socket of the pH Combined Electrode Sensor cable to come
  in contact with moisture or oil of any kind. Likewise, ensure fingers are clean, otherwise
  the insulation will deteriorate, resulting in unstable indication.
  Be sure to keep the cable dry and clean at all times.
  If the cable is stained, clean it with alcohol, and dry it completely.
• For calibration or electrode checking/replacement, the pH Combined Electrode Sensor
  cable should be wired with sufficient length.
• Keep the pH Combined Electrode Sensor cable and junction cable away from electrical
  devices, such as motors or their power lines from which inductive interference
  emanates.

**Connection**

The pH Combined Electrode Sensor cable has the following terminals:

| Code | Terminal |
|------|----------|
| G | Glass electrode terminal |
| R | Reference electrode terminal |
| T, T | Temperature compensation electrode terminals (Cu500) |
| A, B | Temperature compensation electrode terminals [Pt100 (2-wire), Pt1000] |
| A, B, B | Temperature compensation electrode terminals [Pt100 (3-wire)] |
| E | Shield wire terminal |

For the pH Combined Electrode Sensor with No Temperature Compensation, T, T or A, B, B cables are not available.

E cables are available depending on the sensor type.

## 4.1 Lead Wire Solderless Terminal

Use a solderless terminal with an insulation sleeve in which an M3 screw fits as follows. The tightening torque should be 0.63 N•m.

| Solderless Terminal | Manufacturer | Model | Tightening Torque |
|---------------------|--------------|-------|-------------------|
| Y-type | Nichifu Terminal Industries CO.,LTD. | TMEV1.25Y-3 | 0.63 N•m |
| | Japan Solderless Terminal MFG CO.,LTD. | VD1.25-B3A | |
| Ring-type | Nichifu Terminal Industries CO.,LTD. | TMEV1.25-3 | |
| | Japan Solderless Terminal MFG CO.,LTD. | V1.25-3 | |

(Fig. 4.1-1)

## 4.2 Terminal Arrangement

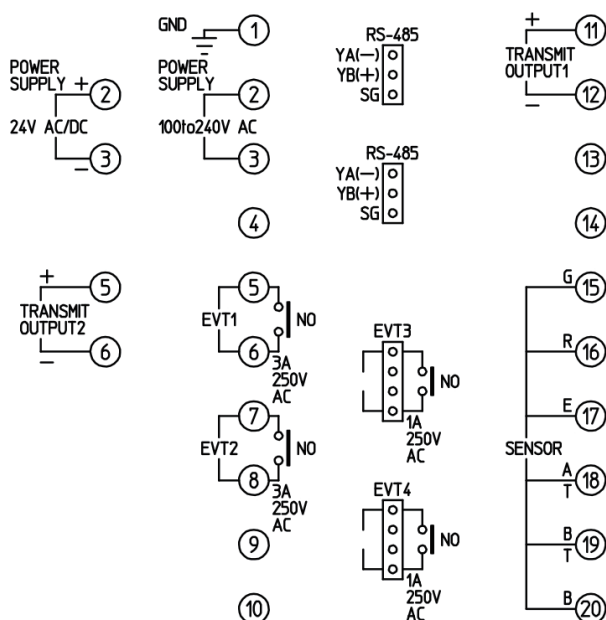

(Fig. 4.2-1)

| GND | Ground |
|---|---|
| POWER SUPPLY | 100 to 240 V AC or 24 V AC/DC (when 1 is added after the model) <br> **For 24 V DC, ensure polarity is correct.** |
| EVT1 | EVT1 output (Contact output 1) |
| EVT2 | EVT2 output (Contact output 2) |
| TRANSMIT OUTPUT1 | Transmission output 1 |
| TRANSMIT OUTPUT2 | Transmission output 2 (TA2 option) |
| G, R | Electrode sensor |
| E | Shield wire |
| T, T | Temperature compensation sensor (Cu500) |
| A, B | Temperature compensation sensor [Pt100 (2-wire), Pt1000] |
| A, B, B | Temperature compensation sensor [Pt100 (3-wire)] |
| RS-485 | Serial communication (C5 option) <br> 2 connectors are wired internally. <br> Use the included wire harnesses C5J and C0J. |
| EVT3 | EVT3 output (Contact output 3) (EVT3 option) <br> Use the included wire harness HBJ. |
| EVT4 | EVT4 output (Contact output 4) (EVT3 option) <br> Use the included wire harness HBJ. |

# 5. Outline of Key Operation and Setting Groups

## 5.1 Outline of Key Operation

There are 2 setting modes: Simple Setting mode, and Group Selection mode in which setting items are divided into groups.

To enter Simple Setting mode, press the SET key in pH/Temperature Display Mode, or Cleansing Output Mode.

To enter Group Selection mode, press the MODE key in pH/Temperature Display Mode, or Cleansing Output Mode.

Select a group with the MODE key, and press the SET key. The unit enters each setting item. To set each item, use the △ or ▽ key, and register the set value with the SET key.

## 5.2 Setting Groups

Setting groups are described in the next page.

### [About Each Mode and Setting Items]

(*1) In pH/Temperature Display mode, or Cleansing Output mode, measurement starts, indicating the item selected in [Backlight selection (p.37)] in the Basic Function group.

If power is turned ON again, the last mode at power OFF (pH/Temperature Display mode, or Cleansing Output mode) will resume.

(*2) If $cLEC$ (Cleansing output) is selected in [EVT1 type to EVT4 type] in the EVT1 to EVT4 Action groups, the unit can enter Manual cleansing mode.

After cleansing action is complete, the unit automatically reverts to Cleansing Output mode.

(*3) If $NoNE$ (No temperature compensation) is selected in [Electrode RTD (p.24)] in the Temperature Input group, the unit will not move to Temperature Calibration mode.

(*4) Available when Transmission output 2 (TA2 option) is ordered.

(*5) Not available if Transmission output 2 (TA2 option) is ordered.

(*6) Available when the EVT3, EVT4 outputs (EVT3 option) is ordered.

### [Key Operation]

- △ + ▽ (3 sec): Press and hold the △ key and ▽ key (in that order) together for 3 seconds. The unit will proceed to Manual Cleansing mode.
- △ + MODE (3 sec): Press and hold the △ key and MODE key (in that order) together for 3 seconds. The unit will proceed to Temperature Calibration mode.
- ▽ + MODE (3 sec): Press and hold the ▽ key and MODE key (in that order) together for 3 seconds. The unit will proceed to pH Calibration mode.
- △ + SET (3 sec): Press the △ and SET key (in that order) together for 3 seconds. The unit will proceed to Transmission output 1 Zero adjustment mode.
- ▽ + SET (3 sec): Press the ▽ and SET key (in that order) together for 3 seconds. The unit will proceed to Transmission output 2 Zero adjustment mode.
- MODE or SET : Press the MODE or SET key. The unit will proceed to the next setting item, illustrated by an arrow.
- SET or MODE : Press the SET or MODE key until the desired setting mode appears.
- To revert to pH/Temperature Display Mode, or Cleansing Output Mode, press and hold the MODE key for 3 seconds while in any mode.

**POWER ON**

[About Key Operation]

• △ + ▽ (3 sec): Press and hold the △ and ▽ keys (in that order) together for 3 sec. The unit will enter Manual cleansing mode.

• △ + MODE (3 sec): Press and hold the △ and MODE keys (in that order) together for 3 sec. The unit will enter Temperature Calibration mode.

• ▽ + MODE (3sec): Press and hold the ▽ and MODE keys (in that order) together for 3 sec. The unit will enter pH Calibration mode.

• △ + SET (3sec): Press and hold the △ and SET keys (in that order) together for 3 sec. The unit will enter Transmission output 1 Zero adjustment mode.

• ▽ + SET (3sec): Press and hold the ▽ and SET keys (in that order) together for 3 sec. The unit will enter Transmission output 2 Zero adjustment mode.

• MODE, SET: Press the MODE or SET key. The unit will enter the next setting item.

• To revert to pH/Temperature Display Mode, or Cleansing Output Mode, press and hold the MODE key for 3 sec while in any mode.

# 7. Setup

Setup should be done before using this instrument according to the user's conditions:
Setting the pH input, Temperature input, EVT1, EVT2, EVT3 (EVT3 option) and EVT4 (EVT3 option) types, Serial communication (C5 option), Transmission output 1, Transmission output 2 (TA2 option), and Indication settings (Backlight selection, pH color, etc.)

Setup can be conducted in the pH Input group, Temperature Input group, EVT1, EVT2, EVT3, EVT4 Action groups and Basic Function group.

If the user's specification is the same as the factory default of the AER-102-PH, or if setup has already been completed, it is not necessary to set up the instrument. Proceed to Section "8. Calibration (p.42)".

## 7.1 Turn the Power Supply to the AER-102-PH ON.

For approx. 4 seconds after the power is switched ON, the following characters are indicated on the pH Display and Temperature Display.
Depending on the input specification, indication on the Temperature Display differs as follows:

**Pt spec**

| pH Display | Temperature Display | Item selected in [Electrode RTD (p.24)] | Item selected in [Pt100 input wire type (p.24)] |
|---|---|---|---|
| PH□□□ | Unlit | NoNE□: No temperature compensation | |
| | Pſ IO□ | Pſ IO□: Pt1000 | |
| | Pſ□2□ | Pſ I□□: Pt100 | 2WI RE: 2-wire type |
| | Pſ□3□ | | 3WI RE: 3-wire type |

**Cu spec**

| pH Display | Temperature Display | Item selected in [Electrode RTD (p.24)] |
|---|---|---|
| PH□□□ | Unlit | NoNE□: No temperature compensation |
| | cU5□□ | cU5□□: Cu500 |

During this time, all outputs are in OFF status, and action indicators go off.
After that, measurement starts, indicating the item selected in [Backlight selection (p.37)].
This status is called pH/Temperature Display Mode, or Cleansing Output Mode.

### 7.2 pH Input Group
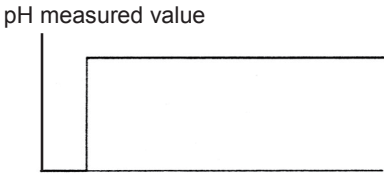

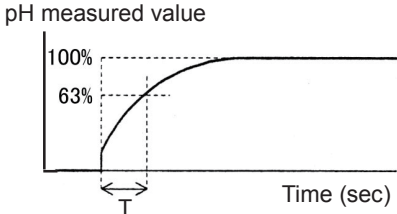

To enter the pH Input group, follow the procedure below.

① _F.Nc. 1_  Press the  **MODE**  key in pH/Temperature Display Mode, or Cleansing Output Mode.

② _TYPE_  Press the  **SET**  key.

The unit proceeds to the pH Input group, and "pH 7 calibration standard" item will appear.

| Character | Setting Item, Function, Setting Range | Factory Default |
|---|---|---|
| _TYPE_ _JI 5_ | **pH 7 calibration standard** <br> • Selects pH 7 calibration value standard. <br> • Not available if _MANU_ (Manual) is selected in [pH calibration Auto/Manual]. <br> • _JI 5_ : JIS (Japanese Industrial standards) <br>   _U5_ : US standard | JIS |
| _5EPH_ _PH4_ | **2nd solution** <br> • Selects the 2nd solution for the automatic pH calibration out of pH 2, pH 4, pH 9 and pH 10 (JIS). <br> [The 1st solution is fixed at pH 7 (JIS or US standard).] <br> • Not available if _MANU_ (Manual) is selected in [pH calibration Auto/Manual]. <br> • _PH2_ : pH 2 <br>   _PH4_ : pH 4 <br>   _PH9_ : pH 9 <br>   _PH 10_ : pH 10 | pH 4 |
| _AJ5T_ _AUTo_ | **pH calibration Auto/Manual** <br> • Selects either automatic or manual pH calibration. <br> • _AUTo_ : Automatic <br>   _MANU_ : Manual | Automatic |
| _dP 1_ _0.00_ | **Decimal point place** <br> • Selects the decimal point place. <br> • _0_ : No decimal point <br>   _0.0_ : 1 digit after decimal point <br>   _0.00_ : 2 digits after decimal point | 2 digits after decimal point |

| Character | Setting Item, Function, Setting Range | Factory Default |
|---|---|---|
| *FILT* □<br>□□□*0.0* | **pH input filter time constant**<br>• Sets filter time constant for pH input.<br>Even when pH measured value before filter process changes<br>as shown in (Fig. 7.2-1), if the filter time constant "T" is set, the pH<br>measured value changes as shown in (Fig. 7.2-2) so that pH<br>measured value after finishing filter process can reach 63% (of the<br>desired value) after T seconds have passed.<br>If the filter time constant is set too large, it affects EVT action due to<br>the delay of response.<br>(e.g.) In case the LSD (least significant digit) of the pH measured value<br>prior to filter process is fluctuating, it can be suppressed by using<br>the filter time constant.<br><br><br><br>pH measured value  pH measured value<br>100% / 63% / Time (sec) / T / Time (sec)<br>(Fig. 7.2-1)     (Fig. 7.2-2)<br>• Setting range: 0.0 to 60.0 seconds | 0.0 seconds |
| *PhO* □<br>□□*0.00* | **pH input sensor correction**<br>• Sets pH input sensor correction value.<br>This corrects the input value from the pH Combined Electrode Sensor.<br>When a sensor cannot be set at the exact location where<br>measurement is desired, the sensor-measured pH may deviate from<br>the pH in the measured location. In this case, desired pH can be<br>obtained by adding a sensor correction value.<br>However, it is effective within the measurement range regardless of<br>the sensor correction value.<br><br>pH after sensor correction= Current pH + (Sensor correction value)<br>• Setting range: pH -1.40 to 1.40 (*) | 0.00 |
| *dFcr* □<br>□□□*20* | **pH inputs for moving average**<br>• Sets the number of pH inputs used to obtain a moving average.<br>• Setting range: 1 to 120 | 20 |

(*) The placement of the decimal point does not follow the selection. It is fixed.

### 7.3 Temperature Input Group

To enter the Temperature Input group, follow the procedure below.

① *F.Nc.2* □   Press the **MODE** key twice in pH/Temperature Display Mode, or
Cleansing Output Mode.

② *SENS* □   Press the **SET** key.

The unit enters the Temperature Input group, and "Electrode RTD" item will appear.

| Character | Setting Item, Function, Setting Range | Factory Default |
|---|---|---|
| 5EN5☐ PΓ I0☐ | **Electrode RTD**<br><br>• Selects RTD type of the electrode.<br>• Depending on the input specification, the following can be selected.<br>   **Pt spec**<br>     NoNE☐ : No temperature compensation<br>     PΓ I0☐ : Pt1000<br>     PΓ I☐ : Pt100<br>   **Cu spec**<br>     NoNE☐ : No temperature compensation<br>     cU5☐ : Cu500 | Pt spec: Pt1000<br>Cu spec: Cu500 |
| 5ΓNd☐ ☐☐25.0 | **Reference temperature**<br>• Sets reference temperature of temperature compensation.<br>• Available when NoNE☐ (No temperature compensation) is selected in [Electrode RTD].<br>• Setting range: 5.0 to 95.0℃ | 25.0℃ |
| dP2☐☐ ☐☐☐0.0 | **Decimal point place**<br>• Selects decimal point place to be indicated on the Temperature Display.<br>• ☐☐☐☐☐0 : No decimal point<br>  ☐☐☐☐0.0 : 1 digit after decimal point | 1 digit after decimal point |
| cNEcΓ 3WI RE | **Pt100 input wire type**<br>• Selects the input wire type when PΓ I☐ (Pt100) is selected in [Electrode RTD].<br>• Available only when PΓ I☐ (Pt100) is selected in [Electrode RTD].<br>• 2WI RE : 2-wire type<br>  3WI RE : 3-wire type | 3-wire type |
| cAbLE ☐☐☐0.0 | **Cable length correction**<br>• Sets the cable length correction value.<br>• Available when 2WI RE (2-wire type) is selected in [Pt100 input wire type].<br>• Setting range: 0.0 to 100.0 m | 0.0 m |
| c5Ec☐ ☐☐0.30 | **Cable cross-section area**<br>• Sets the cable cross-section area.<br>• Available when 2WI RE (2-wire type) is selected in [Pt100 input wire type].<br>• Setting range: 0.10 to 2.00 mm$^2$ | 0.30 mm$^2$ |
| dFcΓ☐ ☐☐☐20 | **Temperature inputs for moving average**<br>• Sets the number of temperature inputs used to obtain a moving average.<br>• Setting range: 1 to 120 | 20 |

#### 7.4 EVT1 Action Group

To enter the EVT1 Action group, follow the procedure below.

This group is not available if Transmission output 2 (TA2 option) is ordered.

① $EVT.o1$  Press the MODE key 3 times in pH/Temperature Display Mode, or Cleansing Output Mode.
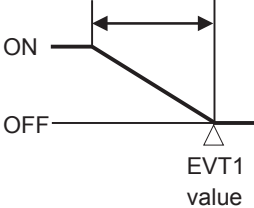

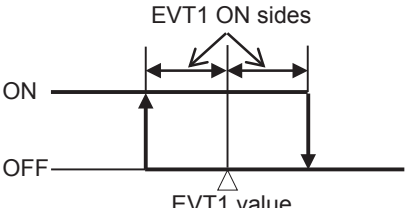

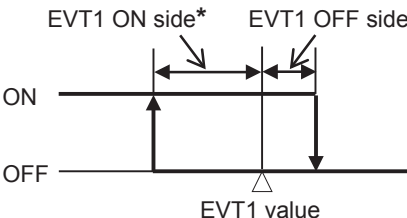

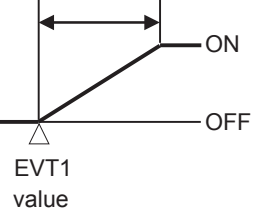

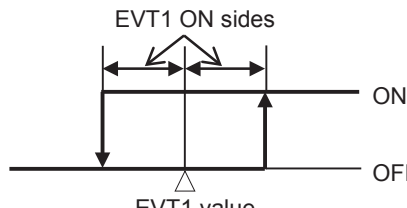

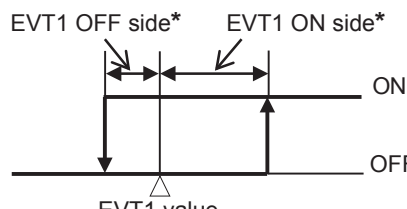

② $EVT1F$  Press the SET key.

The unit proceeds to the EVT1 Action group, and "EVT1 type" will appear.

| Character | Setting Item, Function, Setting Range | Factory Default |
|---|---|---|
| $EVT1F$ <br> $-----$ | **EVT1 type** <br> • Selects an EVT1 output (Contact output 1) type. (Fig 7.4-1, pp.26,27) <br> **Note: If EVT1 type is changed, EVT1 value defaults to 0.00 or 0.0.** <br> • If $NoNE$ (No temperature compensation) is selected in [Electrode RTD (p.23)], even if Temperature input low limit or Temperature input high limit action is selected, EVT1 action will be disabled. <br> • $-----$ : No action <br> $PH\_L$ : pH input low limit action <br> $PH\_H$ : pH input high limit action <br> $TEMPL$ : Temperature input low limit action <br> $TEMPH$ : Temperature input high limit action <br> $ERoUT$ : Error output [When the error type is "Error" (Table 7.4-1), the output is turned ON.] <br> $FAIL$ : Fail output [When the error type is "Fail" (Table 7.4-1), the output is turned ON.] <br> $cLEo$ : Cleansing output <br> $EPUL$ : pH input error alarm output <br> $EPVA$ : pH fluctuation alarm output <br> $PH\_HL$ : pH input High/Low limits independent action <br> $TEMHL$ : Temperature input High/Low limits independent action | No action |

• **Error output, Fail output**
**(Table 7.4-1)**

| Error Type | Error Contents | Description |
|---|---|---|
| Error | Response Speed Error | When calibrating, the response of the pH Combined Electrode Sensor is slow. When the difference between the input and each of the 1st and 2nd solutions are within pH $\pm1.50$, and input fluctuation is over pH $\pm0.05$ (in 10 seconds of assessment cycles) for 5 minutes, this is assumed to be an error. However, if input fluctuation is less than or equal to pH $\pm0.05$, this is assumed to be within the normal range. |
| Error | Electrode Sensitivity Error | When calibrating, sensitivity of the pH Combined Electrode Sensor has deteriorated. The difference between 1st and 2nd standard solution value after calibration is less than or equal to pH 2.00. |
| Error | Asymmetry Potential Error | When calibrating pH 7, the difference in electromotive force between the sensor-measured value and standard value exceeds the equivalent of pH $\pm1.50$. |
| Error | Standard Solution Error | The specified standard solution has not been used. When pH $\pm1.50$ is exceeded for the 1st and 2nd solutions. |

| Character | Setting Item, Function, Setting Range | Factory Default |
|---|---|---|

| Error Type | Error Contents | Description |
|---|---|---|
| Error | Solution Temperature Error | When temperature is 55℃ or more at pH 10 solution. |
| Error | Outside Temp. Compen. Range | Measured temperature has exceeded 110.0℃. |
| Error | Outside Temp. Compen. Range | Measured temperature is less than 0.0℃. |
| Fail | Temp. Sensor Burnout | Temperature sensor lead wire is burnt out. |
| Fail | Temp. Sensor Short-circuited | Temperature sensor lead wire is short-circuited. |

Abbreviations: Temp.: Temperature,   Compen: Compensation

• **EVT1 Action**

| EVT1 Type | P Control Action | ON/OFF Control Action |
|---|---|---|
| pH input low limit action,<br><br>Temperature input low limit action<br><br>(Activated based on indication value) | EVT1 proportional band<br><br>ON<br>OFF<br>EVT1 value | If Medium Value is selected in [EVT1 hysteresis type]:<br>EVT1 ON sides<br>ON<br>OFF<br>EVT1 value<br><br>If Reference Value is selected in [EVT1 hysteresis type]:<br>EVT1 ON side* EVT1 OFF side*<br>ON<br>OFF<br>EVT1 value |
| pH input high limit action,<br><br>Temperature input high limit action<br><br>(Activated based on indication value) | EVT1 proportional band<br><br>ON<br>OFF<br>EVT1 value | If Medium Value is selected in [EVT1 hysteresis type]:<br>EVT1 ON sides<br>ON<br>OFF<br>EVT1 value<br><br>If Reference Value is selected in [EVT1 hysteresis type]:<br>EVT1 OFF side* EVT1 ON side*<br>ON<br>OFF<br>EVT1 value |

(*) Time unit follows the selection in [pH input error alarm time unit].

| Character | Setting Item, Function, Setting Range | Factory Default |
|---|---|---|
| *E 1PAr*<br>*0* | **EVT1 pH fluctuation alarm time** | 0 hours |
| | • Sets time to assess EVT1 pH fluctuation alarm.<br>  Disabled when set to 0 (zero).<br>• Available only when *EPvA* (pH fluctuation alarm output) is<br>  selected in [EVT1 type].<br>• Setting range: 0 to 72 hours | |
| *E 1PAH*<br>*0.00* | **EVT1 pH fluctuation alarm band** | pH 0.00 |
| | • Sets the band to assess EVT1 pH fluctuation alarm.<br>  Disabled when set to pH 0.00.<br>• Available only when *EPvA* (pH fluctuation alarm output) is<br>  selected in [EVT1 type].<br>• Setting range: pH 0.00 to 14.00 | |
| *E 1_L*<br>*0.00* | **EVT1 High/Low limits independent<br>lower side value** | pH input: pH 0.00<br>Temperature input: 0.0℃ |
| | • Sets the lower side value of EVT1 High/Low limits independent<br>  action. (Fig. 7.4-1)(p.27)<br>  Disabled when set to pH 0.00 or 0.0℃.<br>• Available when *PH_HL* (pH input High/Low limits independent<br>  action) or *rEMHL* (Temperature input High/Low limits independent<br>  action) is selected in [EVT1 type].<br>• Setting range:<br>  pH input: pH 0.00 to 14.00<br>  Temperature input: 0.0 to 100.0℃ | |
| *E 1_H*<br>*0.00* | **EVT1 High/Low limits independent<br>upper side value** | pH input: pH 0.00<br>Temperature input: 0.0℃ |
| | • Sets the upper side value of EVT1 High/Low limits independent<br>  action. (Fig. 7.4-1)(p.27)<br>  Disabled when set to pH 0.00 or 0.0℃.<br>• Available when *PH_HL* (pH input High/Low limits independent<br>  action) or *rEMHL* (Temperature input High/Low limits independent<br>  action) is selected in [EVT1 type].<br>• Setting range:<br>  pH input: pH 0.00 to 14.00<br>  Temperature input: 0.0 to 100.0℃ | |
| *E 1_HY*<br>*0.10* | **EVT1 hysteresis** | pH input: 0.10 pH<br>Temperature input: 1.0℃ |
| | • Sets hysteresis of EVT1 High/Low limits independent action.<br>  (Fig. 7.4-1)(p.27)<br>• Available when *PH_HL* (pH input High/Low limits independent<br>  action) or *rEMHL* (Temperature input High/Low limits independent<br>  action) is selected in [EVT1 type].<br>• Setting range:<br>  pH input: pH 0.01 to 4.00<br>  Temperature input: 0.1 to 10.0℃ | |

### 7.5 EVT2 Action Group

To enter the EVT2 Action group, follow the procedure below.

① $E\mathrel{\mkern-2mu} \mathrel{\mkern-1mu}\Gamma.o2$　Press the **MODE** key 4 times in pH/Temperature Display Mode, or Cleansing Output Mode.

② $E\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}\Gamma 2F$　Press the **SET** key.
The unit proceeds to the EVT2 Action group, and "EVT2 type" appears.

Action, indication condition and setting range of the EVT2 Action group are the same as those of EVT1 Action group.

Substitute EVT1 with EVT2, and refer to the EVT1 Action group (pp. 25 to 32).

(e.g.) $E\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}\Gamma\ IF \longrightarrow E\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}\Gamma 2F$

$E\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}I\square \longrightarrow E\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}2\square$

### 7.6 EVT3 Action Group

EVT3 Action group is indicated only when EVT3, EVT4 outputs (EVT3 option) are/is ordered.

To enter the EVT3 Action group, follow the procedure below.

① $E\mathrel{\mkern-2mu} \mathrel{\mkern-1mu}\Gamma.o3$　Press the **MODE** key 5 times in pH/Temperature Display Mode, or Cleansing Output Mode.

② $E\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}\Gamma 3F$　Press the **SET** key.
The unit proceeds to the EVT3 Action group, and "EVT3 type" appears.

Action, indication condition and setting range of the EVT3 Action group are the same as those of EVT1 Action group.

Substitute EVT1 with EVT3, and refer to the EVT1 Action group (pp. 25 to 32).

(e.g.) $E\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}\Gamma\ IF \longrightarrow E\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}\Gamma 3F$

$E\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}I\square \longrightarrow E\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}3\square$

### 7.7 EVT4 Action Group

EVT4 Action group is indicated only when EVT3, EVT4 outputs (EVT3 option) are/is ordered.

To enter the EVT4 Action group, follow the procedure below.

① $E\mathrel{\mkern-2mu} \mathrel{\mkern-1mu}\Gamma.o4$　Press the **MODE** key 6 times in pH/Temperature Display Mode, or Cleansing Output Mode.

② $E\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}\Gamma 4F$　Press the **SET** key.
The unit proceeds to the EVT4 Action group, and "EVT4 type" appears.

Action, indication condition and setting range of the EVT4 Action group are the same as those of EVT1 Action group.

Substitute EVT1 with EVT4, and refer to the EVT1 Action group (pp. 25 to 32).

(e.g.) $E\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}\Gamma\ IF \longrightarrow E\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}\Gamma 4F$

$E\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}I\square \longrightarrow E\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}\mathrel{\mkern-1mu}4\square$

### 7.8 Basic Function Group

To enter the Basic Function group, follow the procedure below.

① *o̅C̅E̅R̅* Press the **MODE** key 5 times in pH/Temperature Display Mode, or Cleansing Output Mode.

If EVT3, EVT4 outputs (EVT3 option) are/is ordered, press the **MODE** key 7 times in pH/Temperature Display Mode, or Cleansing Output Mode.

② *L o c K̅* Press the **SET** key.

The unit enters the Basic Function group, and the "Set Value Lock" item will appear.

| Character | Setting Item, Function, Setting Range | Factory Default |
|---|---|---|
| *L o c K̅*  *‾-‾-‾-‾-* | **Set value lock** | Unlock |
| | • Locks the set values to prevent setting errors.<br>• *‾-‾-‾-‾-* (Unlock): All set values can be changed.<br>*L o c K̅ 1* (Lock 1) : None of the set values can be changed.<br>*L o c K̅2* (Lock 2) : Only EVT1, EVT2, EVT3, EVT4 values can be changed.<br>*L o c K̅ 3* (Lock 3) : All set values – except Electrode RTD, Temperature calibration value, pH calibration value, pH calibration Auto/Manual, Transmission output 1 Zero and Span adjustment values, Transmission output 2 Zero and Span adjustment values – can be temporarily changed.<br>However, they revert to their previous value after the power is turned off because they are not saved in the non-volatile IC memory.<br>Do not change setting items (EVT1, EVT2, EVT3, EVT4 types). If they are changed, they will affect other setting items.<br>Be sure to select Lock 3 when changing the set value frequently via software communication. (If a value set via software communication is the same as the value before the setting, the value will not be written in the non-volatile IC memory.) | |
| *c M̅h̅L̅*  *N o M L̅* | **Communication protocol** | Shinko protocol |
| | • Selects communication protocol.<br>• Available when the Serial communication (C5 option) is ordered.<br>• *N o M L̅* : Shinko protocol<br>*M o d̅ R̅* : MODBUS ASCII mode<br>*M o d̅ R̅* : MODBUS RTU mode | |
| *c M̅N o̅*  *‾‾‾‾0* | **Instrument number** | 0 |
| | • Sets the instrument number of this unit. (The instrument numbers should be set one by one when multiple instruments are connected, otherwise communication is impossible.)<br>• Available when the Serial communication (C5 option) is ordered.<br>• Setting range: 0 to 95 | |

| Character | Setting Item, Function, Setting Range | Factory Default |
|---|---|---|
| `cM5P` `96` | **Communication speed**<br>• Selects a communication speed equal to that of the host computer.<br>• Available when the Serial communication (C5 option) is ordered.<br>• `96` : 9600 bps<br>  `192` : 19200 bps<br>  `384` : 38400 bps | 9600 bps |
| `cMFr` `7EVN` | **Data bit/Parity**<br>• Selects data bit and parity.<br>• Available when the Serial communication (C5 option) is ordered.<br>• `8NoN` : 8 bits/No parity<br>  `7NoN` : 7 bits/No parity<br>  `8EVN` : 8 bits/Even<br>  `7EVN` : 7 bits/Even<br>  `8odd` : 8 bits/Odd<br>  `7odd` : 7 bits/Odd | 7 bits/Even |
| `cM5r` `1` | **Stop bit**<br>• Selects the stop bit.<br>• Available when the Serial communication (C5 option) is ordered.<br>• `1`: 1 bit<br>  `2`: 2 bits | 1 bit |
| `rRo51` `PH` | **Transmission output 1 type**<br> • Selects Transmission output 1 type.<br>• If `NoNE` (No temperature compensation) is selected in [Electrode RTD (p.23)], and if `rEMP` (Temperature transmission) is selected, the transmission output 1 value will become the value set in [Reference temperature (p.24)], regardless of selection in [Temperature Display when no temperature compensation (p.39)].<br>• `PH` : pH transmission<br>  `rEMP` : Temperature transmission<br>  `MV1` : EVT1 MV transmission (*1)<br>  `MV2` : EVT2 MV transmission<br>  `MV3` : EVT3 MV transmission (*2)<br>  `MV4` : EVT4 MV transmission (*2) | pH transmission |
| `rRLH1` `1400` | **Transmission output 1 high limit** | pH transmission: pH 14.00<br>Temperature transmission: 100.0℃<br>MV transmission: 100.0% |
| | • Sets the Transmission output 1 high limit value. (This value correponds to 20 mA DC output.)<br> If Transmission output 1 high limit and low limit are set to the same value, transmission output 1 will be fixed at 4 mA DC.<br>• Setting range:<br> pH transmission: Transmission output 1 low limit to pH 14.00 (*3)<br> Temperature transmission: Transmission output 1 low limit to 100.0℃ (*3)<br> MV transmission: Transmission output 1 low limit to 100.0% | |

(*1) Not available when Transmission output 2 (TA2 option) is ordered.
(*2) Available when EVT3, EVT4 outputs (EVT3 option) are/is ordered.
(*3) The placement of the decimal point does not follow the selection. It is fixed.
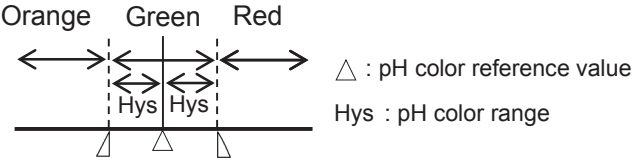

| Character | Setting Item, Function, Setting Range | Factory Default |
|---|---|---|
| `FRLL1`<br>`☐☐0.00` | **Transmission output 1 low limit** | pH transmission: pH 0.00<br>Temperature transmission: 0.0℃<br>MV transmission: 0.0% |
| | • Sets the Transmission output 1 low limit value. (This value correponds to 4 mA DC output.)<br> If Transmission output 1 high limit and low limit are set to the same value, transmission output 1 will be fixed at 4 mA DC.<br> • Setting range:<br> pH transmission: pH 0.00 to Transmission output 1 high limit (*1)<br> Temperature transmission: 0.0℃ to Transmission output 1 high limit (*1)<br> MV transmission: 0.0% to Transmission output 1 high limit | |
| `FRo42`<br>`FEMP☐` | **Transmission output 2 type** | Temperature transmission |
| | • Selects Transmission output 2 type.<br> • If `NoNE☐` (No temperature compensation) is selected in [Electrode RTD (p.23)], and if `FEMP☐` (Temperature transmission) is selected, the transmission output 2 value will become the value set in [Reference temperature (p.24)], regardless of selection in [Temperature Display when no temperature compensation (p.39)].<br> • `PH☐☐☐` : pH transmission<br> `FEMP☐` : Temperature transmission<br> `MV2☐☐` : EVT2 MV transmission<br> `MV3☐☐` : EVT3 MV transmission (*2)<br> `MV4☐☐` : EVT4 MV transmission (*2) | |
| `FRLH2`<br>`☐100.0` | **Transmission output 2 high limit** | pH transmission: pH 14.00<br>Temperature transmission: 100.0℃<br>MV transmission: 100.0% |
| | • Sets the Transmission output 2 high limit value. (This value correponds to 20 mA DC output.)<br> If Transmission output 2 high limit and low limit are set to the same value, transmission output 2 will be fixed at 4 mA DC.<br> • Setting range:<br> pH transmission: Transmission output 2 low limit to pH 14.00 (*1)<br> Temperature transmission: Transmission output 2 low limit to 100.0℃ (*1)<br> MV transmission: Transmission output 2 low limit to 100.0% | |
| `FRLL2`<br>`☐☐☐0.0` | **Transmission output 2 low limit** | pH transmission: pH 0.00<br>Temperature transmission: 0.0℃<br>MV transmission: 0.0% |
| | • Sets the Transmission output 2 low limit value. (This value correponds to 4 mA DC output.)<br> If Transmission output 2 high limit and low limit are set to the same value, transmission output 2 will be fixed at 4 mA DC.<br> • Setting range:<br> pH transmission: pH 0.00 to Transmission output 2 high limit (*1)<br> Temperature transmission: 0.0℃ to Transmission output 2 high limit (*1)<br> MV transmission: 0.0% to Transmission output 2 high limit | |

(*1) The placement of the decimal point does not follow the selection. It is fixed.
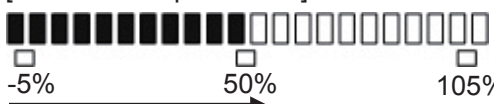

(*2) Available if EVT3, EVT4 outputs (EVT3 option) are/is ordered.

## 7.9 Zero/Slope Indication Group

To enter the Zero/Slope Indication group, follow the procedure below.

① $ZR.5R\square$ Press the <kbd>MODE</kbd> key 6 times in pH/Temperature Display Mode, or Cleansing Output Mode.

      If EVT3, EVT4 outputs (EVT3 option) are/is ordered, press the <kbd>MODE</kbd> key 8 times in pH/Temperature Display Mode, or Cleansing Output Mode.

② $ZERo\square$ Press the <kbd>SET</kbd> key.

      The unit enters the Zero/Slope Indication group, and the "Zero indication" item will appear.

| Character | Setting Item, Function, Indication Range | Factory Default |
|---|---|---|
| $ZERo\square$ <br> $\square\square\square0.0$ | **Zero indication** | 0.0 mV |
| | • Indicates potential difference when pH 7 is calibrated. <br> However, if Manual calibration is performed, zero indication value calculated at previous automatic calibration will not be updated. <br> If calibration is not successfully completed, zero indication will show the value before calibration. <br> • Indication range: Voltage equivalent to pH ±1.5 | |
| $5LoP\square$ <br> $\square\square59.2$ | **Slope indication** | 59.2 mV |
| | • From the voltage calibrated at pH calibration, electromotive force for the change of pH 1 will be indicated. However, if calibration is not successfully completed, slope indication will show the value before calibration. <br> • Indication range: Voltage equivalent to pH 0.00 to 14.00 | |

# 8. Calibration

pH Calibration mode, Temperature Calibration mode, Transmission output 1 and 2 adjustment modes are described below.

## 8.1 pH Calibration Mode

For pH measurement using the glass electrode method, pH in the sensor location, electrode performance and standard solution accuracy respectively play an important role for obtaining reliable data.

There are 2 methods in pH calibration: Automatic Calibration and Manual Calibration.

If $RUT_o$ (Automatic) is selected in [pH Calibration Auto/Manual (p.22)], pH will be automatically calibrated.

If $MRNU$ (Manual) is selected in [pH Calibration Auto/Manual (p.22)], pH will be calibrated manually.

When $NoNE$ (No temperature compensation) is selected in [Electrode RTD (p.24)], calibration will be automatically performed at 25℃ basis.

Perform pH calibration while pH measured value is in a stable status.

The unit cannot enter pH Calibration mode in the following cases:
- When $Lock$ $1$ (Lock 1), $Lock2$ (Lock 2) or $Lock3$ (Lock 3) is selected in [Set value lock (p.34)].
- When $cLEG$ (Cleansing output) is selected in any of [EVT1 to EVT4 types (pp. 25 to 27)], and cleansing action is performing using the 'Cleansing time' and 'Restore time after cleansing' settings.

### 8.1.1 Automatic Calibration

The 1st point standard solution [pH 7 (JIS or US standard)] selected in [pH7 calibration standard (p.22)] is automatically calibrated first. Then, the 2nd point standard solution [any one of pH 2, pH 4, pH 9 or pH 10 (JIS)] selected in [2nd Solution (p.22)] is calibrated. The pH value (based on JIS Z8802) at each temperature of pH standard solution will be automatically calculated.

The following outlines the procedure for Automatic calibration.

### (1) 1st Point Calibration

① Immerse the pH Combined Electrode Sensor in the 1st point standard solution (pH 7). When selecting $bEFH$ (Last value HOLD) in [Transmission output 1 status when calibrating (p.37)] or in [Transmission output 2 status when calibrating] (p.37)], select it while the pH Combined Electrode Sensor is being immersed in the solution currently calibrated.
After that, immerse the pH Combined Electrode Sensor in the 1st point standard solution (pH 7).

② Press and hold the ▽ key and **MODE** key (in that order) together for 3 seconds in pH/Temperature Display Mode, or Cleansing Output Mode.
The unit enters pH Calibration mode, and indicates the following:

| Display | Indicated Contents |
|---|---|
| pH Display | Unlit |
| Temperature Display | $PH 7$ |

③ Press the MODE key.

Automatic calibration of the 1st point starts.

During Automatic calibration, pH on the pH Display flashes.

Automatic calibration is carried out using the Automatic electrode quality evaluation function (*).

When flashing stops, automatic calibration of the 1st point is complete.

(*) pH 7 calibration standard (p.22) and values calibrated by the Automatic electrode quality evaluation function are shown below.

| pH 7 Calibration Standard | Value Calibrated by Automatic Electrode Quality Evaluation Function |
|---|---|
| JIS | pH 6.86 |
| US standard | pH 7.00 |

## (2) 2nd Point Calibration

① Confirm that automatic calibration of the 1st point is complete, then press the MODE key.

The 2nd standard solution will be shown on the display as follows:

| Display | Indicated Contents |
|---|---|
| pH Display | Unlit |
| Temperature Display | pH standard solution selected in [2nd solution (p.22)]. |

② Rinse the electrode, and immerse the pH Combined Electrode Sensor in the 2nd standard solution.

③ Press the MODE key.

Automatic calibration for the 2nd point starts.

During Automatic calibration, pH on the pH Display flashes.

Automatic calibration is carried out using the Automatic electrode quality evaluation function.

When flashing stops, automatic calibration of the 2nd point will be complete.

④ Confirm that automatic calibration of the 2nd point is complete, then press the MODE key.

The newly calibrated values will be applied to the unit, indicating the following:

| Display | Indicated Contents |
|---|---|
| pH Display | cAL☐ |
| Temperature Display | Good☐ |

pH automatic calibration is now complete.

⑤ Press the SET key.

The unit reverts to pH/Temperature Display Mode, or Cleansing Output Mode.

## 8.1.2 Manual Calibration

Manual calibration can be carried out using 2 types of solution with a difference of 2 pH or more.

The following outlines the procedure for Manual calibration.

**(1) 1st Point Calibration**

① Immerse the pH Combined Electrode Sensor in the 1st standard solution.
When selecting ⌐ℰℱℋ⌐ (Last value HOLD) in [Transmission output 1 status when calibrating (p.37)] or in [Transmission output 2 status when calibrating] (p.37)], select it while the pH Combined Electrode Sensor is being immersed in the solution currently calibrated.
After that, immerse the pH Combined Electrode Sensor in the 1st point standard solution.

② Press and hold the ▽ key and MODE key (in that order) together for 3 seconds in pH/Temperature Display Mode, or Cleansing Output Mode.
The unit enters pH Calibration mode, and indicates the following:

| Display | Indicated Contents |
|---|---|
| pH Display | Unlit |
| Temperature Display | ⌐ / ⌐ |

③ Press the MODE key.
The unit enters the 1st point manual calibration mode, indicating the following:

| Display | Indicated Contents |
|---|---|
| pH Display | Indicates ⌐ / ⌐ and pH alternately. |
| Temperature Display | Calibrated value |

④ Set a calibration value with the △ or ▽ key while checking the pH.
pH calibration value: -7.00 to 7.00

⑤ Press the MODE key.
The 1st point calibration is completed, indicating the following:

| Display | Indicated Contents |
|---|---|
| pH Display | Unlit |
| Temperature Display | ⌐2⌐ |

**(2) 2nd Point Calibration**

① Rinse the electrode, and immerse the pH Combined Electrode Sensor in the 2nd standard solution.

② Press the MODE key.
The 2nd point can be calibrated manually, indicating the following:

| Display | Indicated Contents |
|---|---|
| pH Display | Indicates ⌐2⌐ and pH alternately. |
| Temperature Display | Calibrated value |

③ Set a calibration value with the △ or ▽ key while checking the pH.
pH calibration value: -7.00 to 7.00

④ Press the MODE key.
The 2nd point calibration is completed. The newly calibrated values will be applied to the unit, indicating the following:

| Display | Indicated Contents |
|---|---|
| pH Display | ⌐ℛL |
| Temperature Display | ⌐ood |

Manual pH calibration is now complete.

⑤ Press the SET key.
The unit reverts to pH/Temperature Display Mode, or Cleansing Output Mode.

### 8.1.3 Error Code during pH Calibration

During pH calibration, if pH calibration cannot be performed due to unstable pH input or temperature compensation error, etc., the error code (Table 8.1.3-1) will flash on the Temperature Display.

To cancel the error code, press the `MODE` key.

Check the standard solution and pH Combined Electrode Sensor, and calibrate again.

If $Err\square$ (Error output) is selected in [EVT1 type (pp.25 to 27)], and when the error type is "Error" in (Table 8.1.3-1), the EVT1 output will be turned ON.
The same applies to EVT2, EVT3 and EVT4.

If $FAIL\square$ (Fail output) is selected in [EVT1 type (pp.25 to 27)], and when the error type is "Fail" in (Table 8.1.3-1), the EVT1 output will be turned ON.
The same applies to EVT2, EVT3 and EVT4.

**(Table 8.1.3-1)**

| Error Code | Error Type | Error Contents | Description | Occurrence |
|---|---|---|---|---|
| $E\square11\square$ | Error | Response Speed Error | When calibrating, the response of the pH Combined Electrode Sensor is slow. When the difference between the input and each of the 1st and 2nd solutions are within pH ±1.50, and input fluctuation is over pH ±0.05 (in 10 seconds of assessment cycles) for 5 minutes, this is assumed to be an error. However, if input fluctuation is less than or equal to pH ±0.05, this is assumed to be within the normal range. | When calibrating |
| $E\square12\square$ | Error | Electrode Sensitivity Error | When calibrating, sensitivity of the pH Combined Electrode Sensor has deteriorated. The difference between 1st and 2nd standard solution value after calibration is less than or equal to pH 2.00. | |
| $E\square13\square$ | Error | Asymmetry Potential Error | When calibrating pH 7, the difference in electromotive force between the sensor-measured value and standard value exceeds the equivalent of pH ±1.50. | |
| $E\square14\square$ | Error | Standard Solution Error | The specified standard solution has not been used. When pH ±1.50 is exceeded for the 1st and 2nd solutions. | |
| $E\square15\square$ | Error | Solution Temperature Error | When temperature is 55℃ or more at pH 10 solution. | |

45

| Error Code | Error Type | Error Contents | Description | Occurrence |
|---|---|---|---|---|
| $E\text{-}2I$ | Fail | Temp. Sensor Burnout | Temperature sensor lead wire is burnt out. | When measuring or calibrating |
| $E\text{-}22$ | Fail | Temp. Sensor Short-circuited | Temperature sensor lead wire is short-circuited. | |
| $E\text{-}23$ | Error | Outside Temp. Compensation Range | Measured temperature has exceeded 110.0℃. | |
| $E\text{-}24$ | Error | Outside Temp. Compensation Range | Measured temperature is less than 0.0℃. | |

(Abbreviation: Temp.: Temperature)

## 8.2 Temperature Calibration Mode

To calibrate a temperature, set a temperature calibration value.

If $NoNE$ (No temperature compensation) is selected in [Electrode RTD (p.24)], Temperature Calibration mode is not available.

The unit cannot enter Temperature Calibration mode in the following cases:
• If $Lock\ I$ (Lock 1), $Lock2$ (Lock 2) or $Lock3$ (Lock 3) is selected in [Set value lock (p.34)]
• If $cLEG$ (Cleansing output) is selected in any of [EVT1 to EVT4 types (pp. 25 to 27)], and when cleansing action is performing using the 'Cleansing time' and 'Restore time after cleansing' settings

When a sensor cannot be set at the exact location where measurement is desired, the resulting measured temperature may deviate from the temperature in the desired location. In this case, the desired temperature can be set for the desired location by setting a temperature calibration value. However, it is effective within the input rated range regardless of the temperature calibration value.
Temperature after calibration = Current temperature + (Temperature calibration value)
(e.g.) When current temperature is 23.5℃,
     If temperature calibration value is set to 1.5℃: 23.5 + (1.5) = 25.0℃
     If temperature calibration value is set to -1.5℃: 23.5 + (-1.5) = 22.0℃

The following outlines the procedure for temperature calibration.

① Press and hold the △ key and **MODE** key (in that order) together for 3 seconds in pH/Temperature Display Mode, or Cleansing Output Mode.
The unit will proceed to Temperature Calibration mode, indicating the following:

| Display | Indicated Contents |
|---|---|
| pH Display | Indicates $5o$ and temperature alternately. |
| Temperature Display | Temperature calibration value |

② Set a temperature calibration value with the △ or ▽ key while checking temperature.
Setting range: -10.0 to 10.0℃
③ Press the **SET** key.
Temperature calibration is complete, and the unit reverts to pH/Temperature Display Mode, or Cleansing Output Mode.

### 8.3 Transmission Output 1 Adjustment Mode

Fine adjustment of Transmission output 1 is performed.

This PH meter is adjusted at the factory, however, differences may occur between the indication value of the connected equipment (recorders, etc.) and output value of this unit.

In this case, perform Transmission output 1 Zero and Span adjustments.

The unit cannot enter Transmission output 1 Zero adjustment mode in the following cases:

- During pH calibration or temperature calibration
- When $Lock1$ (Lock 1), $Lock2$ ( Lock 2) or $Lock3$ (Lock 3) is selected in [Set value lock (p.34)]
- When $cLEO\square$ (Cleansing output) is selected in any of EVT1 to EVT4 types (pp. 25 to 27) using the 'Cleansing time' and 'Restore time after cleansing' settings.

The following outlines Transmission output 1 adjustment procedure.

① Press and hold the △ and **SET** key (in that order) together for approx. 3 seconds in pH/Temperature Display Mode, or Cleansing Output Mode.
The unit enters Transmission output 1 Zero adjustment mode, and indicates the following:

| Display | Indication Contents |
|---|---|
| pH Display | $AJZ1\square$ |
| Temperature Display | Transmission output 1 Zero adjustment value |

② Set Transmission output 1 Zero adjustment value with the △ , ▽ keys, while viewing the value indicated on the connected equipment (recorders, etc.).
Setting range: ±5.00% of Transmission output 1 span

③ Press the **SET** key.
The unit enters Transmission output 1 Span adjustment mode, and indicates the following:

| Display | Indication Contents |
|---|---|
| pH Display | $AJ41\square$ |
| Temperature Display | Transmission output 1 Span adjustment value |

④ Set Transmission output 1 Span adjustment value with the △ , ▽ keys, while viewing the value indicated on the connected equipment (recorders, etc.).
Setting range: ±5.00% of Transmission output 1 span

⑤ Press the **MODE** key.
The unit reverts to the Transmission output 1 Zero adjustment mode.
Repeat steps ② to ⑤ if necessary.

⑥ To finish the Transmission output 1 adjustment, press the **SET** key in Transmission output 1 Span adjustment mode.
The unit reverts to pH/Temperature Display Mode, or Cleansing Output Mode.

### 8.4 Transmission Output 2 Adjustment Mode

Fine adjustment of Transmission output 2 is performed.

This PH meter is adjusted at the factory, however, differences may occur between the indication value of the connected equipment (recorders, etc.) and output value of this unit.

In this case, perform Transmission output 2 Zero and Span adjustments.

The unit cannot enter Transmission output 2 Zero adjustment mode in the following cases:

• During pH calibration or temperature calibration
• When $Lock\ 1$ (Lock 1), $Lock2$ ( Lock 2) or $Lock3$ (Lock 3) is selected in [Set value lock (p.34)]
• When $cLEG$ (Cleansing output) is selected in any of EVT1 to EVT4 types (pp. 25 to 27) using the 'Cleansing time' and 'Restore time after cleansing' settings.

The following outlines Transmission output 2 adjustment procedure.

① Press and hold the $\triangledown$ and SET key (in that order) together for approx. 3 seconds in pH/Temperature Display Mode, or Cleansing Output Mode.
The unit enters Transmission output 2 Zero adjustment mode, and indicates the following:

| Display | Indication Contents |
|---|---|
| pH Display | $AJZ2$ |
| Temperature Display | Transmission output 2 Zero adjustment value |

② Set Transmission output 2 Zero adjustment value with the $\triangle$ , $\triangledown$ keys, while viewing the value indicated on the connected equipment (recorders, etc.).
Setting range: ±5.00% of Transmission output 2 span
③ Press the SET key.
The unit enters Transmission output 2 Span adjustment mode, and indicates the following:

| Display | Indication Contents |
|---|---|
| pH Display | $AJ42$ |
| Temperature Display | Transmission output 2 Span adjustment value |

④ Set Transmission output 2 Span adjustment value with the $\triangle$ , $\triangledown$ keys, while viewing the value indicated on the connected equipment (recorders, etc.).
Setting range: ±5.00% of Transmission output 2 span
⑤ Press the MODE key.
The unit reverts to the Transmission output 2 Zero adjustment mode.
Repeat steps ② to ⑤ if necessary.
⑥ To finish the Transmission output 2 adjustment, press the SET key in Transmission output 2 Span adjustment mode.
The unit reverts to pH/Temperature Display Mode, or Cleansing Output Mode.

# 9. Measurement

**9.1 Starting Measurement**

After mounting to the control panel, and wiring, setup and calibration are complete, turn the power to the instrument ON. For approx. 4 seconds after the power is switched ON, the following characters are indicated on the pH Display and Temperature Display.

Depending on the input specification, indication on the Temperature Display differs as follows:

**Pt spec**

| pH Display | Temperature Display | Item Selected in [Electrode RTD] (p.24) | Item Selected in [Pt100 input wire type] (p.24) |
|---|---|---|---|
| _PH_ | Unlit | _NoNE_ : No temperature compensation | |
| | _Pr 10_ | _Pr 10_ : Pt1000 | |
| | _Pr 2_ | _Pr 1_ : Pt100 | _2WI RE_ : 2-wire type |
| | _Pr 3_ | | _3WI RE_ : 3-wire type |

**Cu spec**

| pH Display | Temperature Display | Item selected in [Electrode RTD (p.24)] |
|---|---|---|
| _PH_ | Unlit | _NoNE_ : No temperature compensation |
| | _cU5_ | _cU5_ : Cu500 |

During this time, all outputs are in OFF status, and action indicators are turned off. After that, measurement starts, indicating the item selected in [Backlight Selection (p. 37)].

### 9.2 EVT1 to EVT4 Outputs

If $PH\_L\square$ (pH input low limit action), $PH\_H\square$ (pH input high limit action), $\digamma EMPL$ (Temperature input low limit action) or $\digamma EMPH$ (Temperature input high limit action) is selected in [EVT1 type (pp.25 to 27)], the following action is activated.

The same applies to EVT2, EVT3 and EVT4.

・**EVT1 Action**

| EVT1 Type | P Control Action | ON/OFF Control Action |
|---|---|---|
| pH input low limit action,<br><br>Temperature input low limit action<br><br>(Activated based on indication value) | EVT1 proportional band<br>ON / OFF<br>EVT1 value | If Medium Value is selected in [EVT1 hysteresis type]:<br>EVT1 ON sides<br>ON / OFF<br>EVT1 value<br><br>If Reference Value is selected in [EVT1 hysteresis type]:<br>EVT1 ON side EVT1 OFF side<br>ON / OFF<br>EVT1 value |
| pH input high limit action,<br><br>Temperature input high limit action<br><br>(Activated based on indication value) | EVT1 proportional band<br>ON / OFF<br>EVT1 value | If Medium Value is selected in [EVT1 hysteresis type]:<br>EVT1 ON sides<br>ON / OFF<br>EVT1 value<br><br>If Reference Value is selected in [EVT1 hysteresis type]:<br>EVT1 OFF side EVT1 ON side<br>ON / OFF<br>EVT1 value |

| EVT1 Type | ON/OFF Control Action |
|---|---|
| pH input High/Low limits independent action,<br><br>Temperature input High/Low limits independent |  EVT1 hysteresis ... EVT1 hysteresis ON OFF EVT1 High/Low limits independent lower side value / EVT1 value / EVT1 High/Low limits independent upper side value |

(Fig. 9.2-1)

- **P Control Action**

  Within the proportional band, the manipulated variable is output in proportion to the deviation between the EVT1 value and measured value.

| EVT1 Type | Description |
|---|---|
| pH input low limit action,<br><br>Temperature input low limit action | If measured value is lower than [EVT1 value – EVT1 proportional band], EVT1 output is turned ON.<br>If measured value enters within the proportional band, EVT1 output is turned ON/OFF in EVT1 proportional cycles.<br>If measured value exceeds the EVT1 value, EVT1 output is turned OFF. |
| pH input high limit action,<br><br>Temperature input high limit action | If measured value is higher than [EVT1 value + EVT1 proportional band], EVT1 output is turned ON.<br>If measured value enters within the proportional band, EVT1 output is turned ON/OFF in EVT1 proportional cycles.<br>If measured value drops below the EVT1 value, EVT1 output is turned OFF. |

- **ON/OFF Control Action**

| EVT1 Type | Description |
|---|---|
| pH input low limit action,<br>Temperature input low limit action | If measured value is lower than EVT1 value, EVT1 output is turned ON.<br>If measured value exceeds the EVT1 value, EVT1 output is turned OFF. |
| pH input high limit action,<br>Temperature input high limit action | If measured value is higher than EVT1 value, EVT1 output is turned ON.<br>If measured value drops below the EVT1 value, EVT1 output is turned OFF. |

If ON and OFF time are set in [Output ON/OFF Time when EVT1 Output ON (pp.29, 30)], and when EVT1 output is turned ON, EVT1 output is turned ON/OFF in a configured cycle.

**Timing chart (Output ON time and OFF time when EVT1 output is ON)**

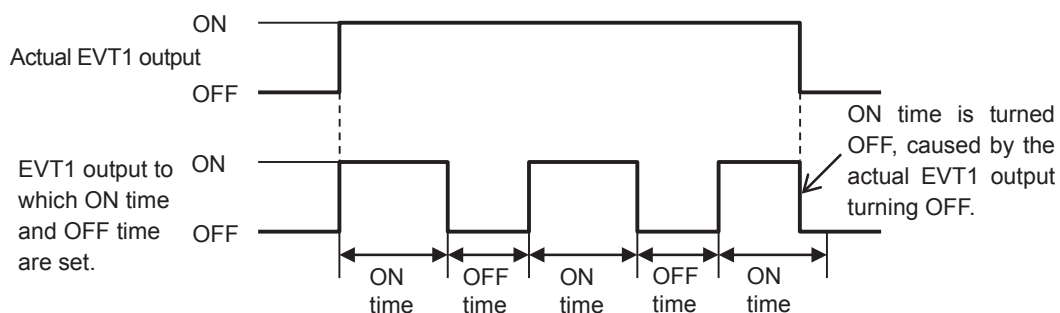

(Fig. 9.2-2)

EVT output status can be read by reading Status flag 2 (EVT1, EVT2, EVT3, EVT4 output flag bit) in Serial communication (C5 option).

EVT output status, when input errors occur, differs depending on the selection in [EVT output when input errors occur (p.39)].
• If ⌐FF☐☐(Disabled) is selected, EVT output is turned OFF when input errors occur.
• If ⌐N☐☐☐(Enabled) is selected, EVT output is maintained when input errors occur.

### 9.3 Error Output

If ⌐⌐⌐☐☐ (Error output) is selected in [EVT1 type (pp.25 to 27], and when the error type is "Error" in (Table 8.1.3-1, pp.45, 46), the EVT1 output is turned ON.
The same applies to EVT2, EVT3 and EVT4.

### 9.4 Fail Output

If ⌐Ɐ⌐ L☐ (Fail output) is selected in [EVT1 type (pp.25 to 27)], and when the error type is "Fail" in (Table 8.1.3-1, pp.45, 46), the EVT1 output is turned ON.
The same applies to EVT2, EVT3 and EVT4.

### 9.5 Cleansing Output

If ⌐L E⌐☐ (Cleansing output) is selected in any of [EVT1 to EVT4 types (pp. 25 to 27)], the unit will enter Cleansing Output Mode.
An EVT output (for which Cleansing output is selected) will turn ON during the configured cleansing time.
When the cleansing interval finishes after restore time has passed, this is counted as one cleansing cycle, and the configured number of cleansing cycles will be repeated.
While cleansing is being performed, other outputs are in OFF status.
Measured values (pH, temperature) are constantly updated.
Programmed action will be performed, except during cleansing action.
When power is turned ON again, the unit starts from the 1st cleansing cycle.
After the configured number of cleansing cycles is finished, the EVT output (for which the cleansing output is selected) is turned OFF, and other outputs perform their programmed operations, however, they are in Cleansing Output Mode.

• **Cleansing Output Action**

Cno: Number of cleansing cycles
Cint: Cleansing interval
Ctm: Cleansing time
Rtm: Restore time after cleansing
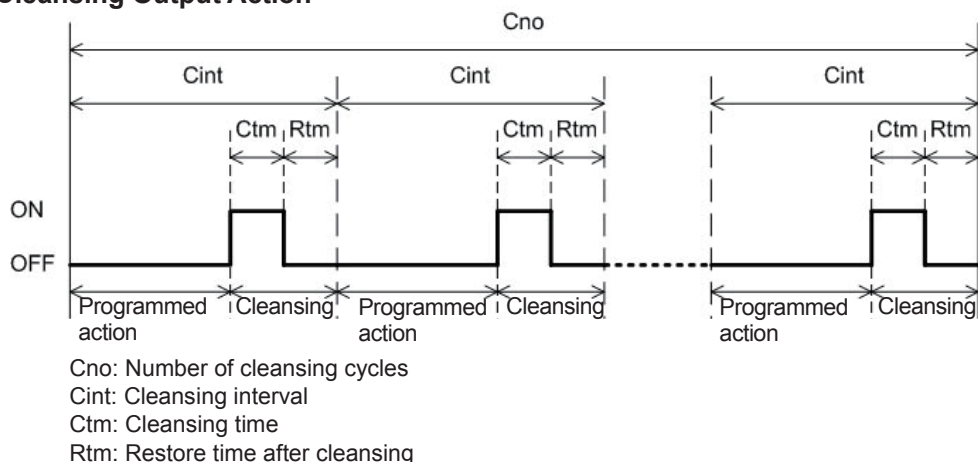

(Fig. 9.5-1)

• If another $cLEC\Box$ (Cleansing output) is selected in any other [EVT type] during cleansing action, the same as the current settings will be used for the cleansing output.
• If $NoNE\Box$ (No temperature compensation) is selected in [Electrode RTD (p.24)], the value set in [Reference temperature] is maintained during cleansing action.

If an error occurs [when temperature measured value is outside the measurement range (e.g.) less than 0.0℃ or exceeding 110.0℃], the following will be displayed:

| pH Display | Temperature Display | |
|---|---|---|
| pH measured value | Less than 0.0℃: | $E\Box24\Box$ |
| pH measured value | Exceeding 110.0℃: | $E\Box23\Box$ |

• During calibration mode or Transmission output 1 or 2 adjustment, if cleansing action initiates after restore time has passed, the cleansing action will not be performed in the current session.
• If the number of cleansing cycles is changed in [Number of cleansing cycles] during cleansing action, the new number will be enabled from the next cleansing cycle.

If any output other than $cLEC\Box$ (Cleansing output) is selected in [EVT1 to EVT4 types (pp.25 to 27)], the unit will revert to pH/Temperature Display Mode.

## 9.6 Manual Cleansing Mode

By pressing the $\triangle$ and $\triangledown$ keys simultaneously for 3 seconds, the unit enters Manual cleansing mode.
In Manual cleansing mode, cleansing action is performed using 'Cleansing time' and 'Restore time after cleansing'.
After manual cleansing action is finished, the unit automatically returns to the Cleansing Output Mode.
If Manual cleansing action initiates during programmed cleansing action, the unit will not enter Manual cleansing mode.
During Manual cleansing mode, if programmed cleansing action initiates after restore time has passed, the programmed cleansing action will not be performed in the current session. Manual cleansing action is also counted as one cleansing cycle.

53

**Manual Cleansing Mode Action**

During cleansing action, Manual cleansing mode via key operation is invalidated – Programmed cleansing mode takes priority.

During Manual cleansing mode, the programmed cleansing action will be invalidated.
Cleansing action by Manual cleansing mode is counted as one cleansing cycles.

Cno: Number of cleansing cycles
Cint: Cleansing interval
Ctm: Cleansing time
Rtm: Restore time after cleansing

(Fig. 9.6-1)

## 9.7 pH Input Error Alarm

pH input error alarm is used for detecting actuator trouble.

Even if pH input error alarm time has elapsed, and if pH input does not become higher than pH input error alarm band, the unit assumes that actuator trouble has occurred, and sets Status flag 2 (EVT1, EVT2, EVT3, EVT4 output flag bit).

In Serial communication, status can be read by reading Status flag 2 (EVT1, EVT2, EVT3, EVT4 output flag bit).

If $EPUL$ (pH input error alarm output) is selected in [EVT1 type (pp.25 to 27)], EVT1 output is turned ON.

The same applies to EVT2, EVT3 and EVT4.

pH input error alarm is disabled in the following cases:
  • During pH calibration
  • When $cLEC$ (Cleansing output) is selected in any of EVT1 to EVT4 types (p.25 to 27), and cleansing action is performing using the 'Cleansing time' and 'Restore time after cleansing' settings.
  • When pH input error alarm time is set to 0 seconds (or minutes) or pH input error alarm band is set to pH 0.0.

## 9.8 Cycle Automatic Variable Function

If deviation between EVT☐ value and measured value enters EVT☐ cycle variable range, the proportional cycle will be automatically extended in accordance with the deviation.

Proportional action OFF time will be extended, and ON / OFF ratio will be adjusted.

However, if EVT☐ cycle extended time is set to 0 (zero), this function will be disabled.

(Fig. 9.8-1)

### 9.9 Error Code during Measurement

For temperature sensor error or outside temperature compensation range during measurement, their corresponding error codes flash on the Temperature Display as shown below in (Table 9.9-1).

**(Table 9.9-1)**

| Error Code | Error Type | Error Contents | Description |
|---|---|---|---|
| $E\text{-}2\,1$ | Fail | Temperature Sensor Burnout | Temperature sensor lead wire is burnt out. |
| $E\text{-}22$ | Fail | Temperature Sensor Short-circuited | Temperature sensor lead wire is short-circuited. |
| $E\text{-}23$ | Error | Outside Temperature Compensation Range | Measured temperature has exceeded 110.0℃. |
| $E\text{-}24$ | Error | Outside temperature Compensation Range | Measured temperature is less than 0.0℃. |

### 9.10 Setting EVT1 to EVT4 Values

EVT1 to EVT4 values can be set in Simple Setting mode.

These setting items are the same as those in EVT1 to EVT4 Action groups.

To enter Simple Setting mode, follow the procedure below.

① $E\text{-}V\,1$  Press the **SET** key in pH/Temperature Display Mode, or Cleansing Output Mode. 'EVT1 value' will appear.

② Set each item with the △ or ▽ key, and register the value with the **SET** key.

| Character | Setting Item, Function, Setting Range | Factory Default |
|---|---|---|
| $E\text{-}V\,1$ ⬜0.00 | **EVT1 value** | pH input: pH 0.00<br>Temperature input: 0.0℃ |
| | • Sets EVT1 value.<br>• Not available if ⬜⬜⬜⬜ (No action), $E\!R\!oU\!\Gamma$ (Error output), $FA\!I\,L$ (Fail output), $cLE\!G$ (Cleansing output) or $EP\!U\!L$ (pH input error alarm output) is selected in [EVT1 type (pp.25 to 27)].<br>• Not available if Transmission output 2 (TA2 option) is ordered.<br>• Setting range:<br>　pH input: pH 0.00 to 14.00 (*)<br>　Temperature input: 0.0 to 100.0℃ (*) | |
| $E\text{-}V2$ ⬜0.00 | **EVT2 value** | pH input: pH 0.00<br>Temperature input: 0.0℃ |
| | • Sets EVT2 value.<br>• Not available if ⬜⬜⬜⬜ (No action), $E\!R\!oU\!\Gamma$ (Error output), $FA\!I\,L$ (Fail output), $cLE\!G$ (Cleansing output) or $EP\!U\!L$ (pH input error alarm output) is selected in [EVT1 type (pp.25 to 27)].<br>• Setting range:<br>　pH input: pH 0.00 to 14.00 (*)<br>　Temperature input: 0.0 to 100.0℃ (*) | |

(*) The placement of the decimal point does not follow the selection. It is fixed.

| Character | Setting Item, Function, Setting Range | Factory Default |
|---|---|---|
| $E 4V 3$ $0.00$ | **EVT3 value** | pH input: pH 0.00<br>Temperature input: 0.0℃ |
| | • Sets EVT3 value.<br>• Not available if ⊡⊡⊡⊡ (No action), $ERoUr$ (Error output),<br>  $FAI L$ (Fail output), $cLEG$ (Cleansing output) or $EPUL$<br>  (pH input error alarm output) is selected in [EVT1 type (pp.25 to 27)].<br>• Available only when EVT3, EVT4 outputs (EVT3 option) are/is<br>  ordered.<br>• Setting range:<br>    pH input: pH 0.00 to 14.00 (*)<br>    Temperature input: 0.0 to 100.0℃  (*) | |
| $E 4V 4$ $0.00$ | **EVT4 value** | pH input: pH 0.00<br>Temperature input: 0.0℃ |
| | • Sets EVT4 value.<br>• Not available if ⊡⊡⊡⊡ (No action), $ERoUr$ (Error output),<br>  $FAI L$ (Fail output), $cLEG$ (Cleansing output) or $EPUL$<br>  (pH input error alarm output) is selected in [EVT1 type (pp.25 to 27)].<br>• Available only when EVT3, EVT4 outputs (EVT3 option) are/is<br>  ordered.<br>• Setting range:<br>    pH input: pH 0.00 to 14.00 (*)<br>    Temperature input: 0.0 to 100.0℃  (*) | |

(*)   The placement of the decimal point does not follow the selection. It is fixed.

③ Press the SET key. The unit reverts to pH/Temperature Display Mode, or Cleansing
Output Mode.

## 9.11 Transmission Output 1 and 2

Converting pH, temperature or MV to analog signal every input sampling period,
outputs in current.

If $NoNE$ (No temperature compensation) is selected in [Electrode RTD (p.24)],
and $TEMP$ (Temperature transmission) is selected in [Transmission output 1 type
(p.35)] or [Transmission output 2 type (p.36)], the value set in [Reference
temperature (p.23)] will be output.

If Transmission output 1 high limit and low limit are set to the same value,
Transmission output 1 will be fixed at 4 mA DC.
If Transmission output 2 high limit and low limit are set to the same value,
Transmission output 2 will be fixed at 4 mA DC.

| Resolution | 12000 |
|---|---|
| Current | 4 to 20 mA DC (Load resistance: Max 550 Ω) |
| Output accuracy | Within ±0.3% of Transmission output 1 or 2 span |

### 9.12 pH Fluctuation Alarm Output

pH fluctuation alarm output is used for detecting pH input fluctuation error.
Even if pH fluctuation alarm time has elapsed – if the change in pH input fluctuation is smaller than the pH fluctuation alarm band – the instrument assumes that a pH fluctuation error has occurred, and sets Status flag 2 (EVT1, EVT2, EVT3, EVT4 output flag bit).
In Serial communication, status can be read by reading Status flag 2 (EVT1, EVT2, EVT3, EVT4 output flag bit).
If $EP\lor A\square$ (pH fluctuation alarm output) is selected in [EVT1 type (pp.25 to 27)], the selected EVT1 output will be turned ON.
The same applies to EVT2, EVT3 and EVT4.

This function will be disabled if pH fluctuation alarm time is set to 0 (zero) hours, or if pH fluctuation alarm band is set to pH 0.00.

# 10. Specifications

## 10.1 Standard Specifications

### Rating

| Rated Scale | Input | | Input Range | Resolution |
|---|---|---|---|---|
| | pH Combined Electrode | | pH 0.00 to 14.00 | pH 0.01 |
| | Pt spec | Pt1000 | 0.0 to 100.0℃ | 0.1℃ |
| | | Pt100 | 0.0 to 100.0℃ | 0.1℃ |
| | Cu spec | Cu500/25℃ | 0.0 to 100.0℃ | 0.1℃ |
| Input | pH Combined Electrode Sensor (pH sensor: JIS Z8802, Temperature element: Pt1000 or Pt100)<br>pH Combined Electrode Sensor (pH sensor: JIS Z8802, Temperature element: Cu500/25℃) | | | |

| Power Supply Voltage | Model | AER-102-PH | AER-102- PH 1 |
|---|---|---|---|
| | Power supply voltage | 100 to 240 V AC 50/60 Hz | 24 V AC/DC 50/60 Hz |
| | Allowable voltage fluctuation range | 85 to 264 V AC | 20 to 28 V AC/DC |

### General Structure

| External Dimensions | 48 x 96 x 98.5 mm (W x H x D) | |
|---|---|---|
| Mounting | Flush (Applicable panel thickness: 1 to 8 mm) | |
| Case | Material: Flame-resistant resin,    Color: Black | |
| Front Panel | Membrane sheet | |
| Drip-proof/Dust-proof | IP66 (for front panel only) | |
| Indication Structure | Display | |
| | pH Display | 11-segment LCD display 5-digits<br>Backlight: Red/Green/Orange<br>Character size: 14.0 x 5.4 mm (H x W) |
| | Temperature Display | 11-segment LCD display 5-digits<br>Backlight: Green<br>Character size: 10.0 x 4.6 mm (H x W) |
| | Output Display | 22-segment LCD display Bar graph<br>Backlight: Green |

| | EVT1 | When EVT1 output (Contact output 1) ON: Lit |
| | EVT2 | When EVT2 output (Contact output 2) ON: Lit |
| | EVT3 | When EVT3 output (Contact output 3) ON: Lit |
| | EVT4 | When EVT4 output (Contact output 4) ON: Lit |
| | T/R | When Serial communication TX output (transmitting): Lit |
| | LOCK | When Lock 1, 2 or 3 is selected: Lit |
| Setting Structure | Input system using membrane sheet key | |

**Indication Performance**

| Repeatability | pH: pH ±0.05 |
|---|---|
| Linearity | pH: pH ±0.05 |
| Indication Accuracy | Temperature: ±1℃ |
| Input Sampling Period | 125 ms (2 inputs) |
| Time Accuracy | Within ±1% of setting time |

**Standard Functions**
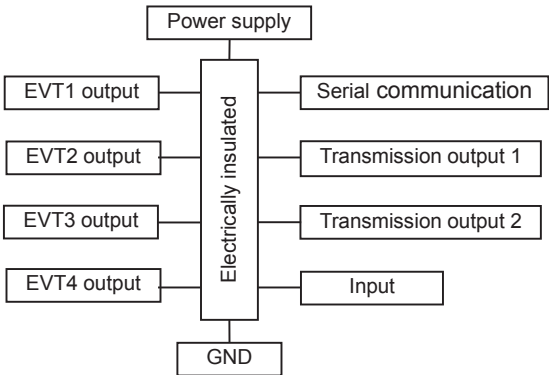

| pH Calibration | | For pH measurement using the glass electrode method, pH in the sensor location, electrode performance and standard solution accuracy respectively play an important role for obtaining reliable data.<br>Input value is shifted via 2-points calibration using the standard solutions.<br>However, it is effective within the input rated range regardless of the calibration value.<br>There are 2 calibration methods: Automatic Calibration,<br>                                                    Manual Calibration |
|---|---|---|
| Temperature Calibration | | When a sensor cannot be set at the exact location where measurement is desired, the resulting measured temperature may deviate from the temperature in the desired location. In this case, the desired temperature can be set for the desired location by setting a temperature calibration value. However, it is effective within the input rated range regardless of the temperature calibration value. |
| Transmission Output 1 | | Converting pH, temperature or MV to analog signal every input sampling periods, outputs the value in current.<br>If $NoNE$ (No temperature compensation) is selected in [Electrode RTD (p.24)], and if $TEMP$ (Temperature transmission) is selected in [Transmission output 1 type (p.35)], the value set in [Reference temperature (p.24)] will be output.<br>If Transmission output 1 high limit and low limit are set to the same value, Transmission output 1 will be fixed at 4 mA DC. |
| | Resolution | 12000 |
| | Output | 4 to 20 mA DC (Load resistance: Max 550 Ω) |
| | Output accuracy | Within ±0.3% of Transmission output 1 span |
| | Transmission Output 1 Adjustment | Fine adjustment of Transmission output 1 is performed by performing Transmission output 1 Zero and Span adjustments. |
| | Transmission Output 1 Status when Calibrating | Selects Transmission output 1 status when calibrating pH.<br>Last value HOLD: Retains the last value before pH calibration, and outputs it.<br>Set value HOLD: Outputs the value set in [Transmission output 1 value HOLD when calibrating].<br>Measured value: Outputs the measured value when calibrating pH. |

| EVT Output | | | |
|---|---|---|---|
| Output Action | P control: When setting proportional band to any value other than 0.00 or 0.0.<br>ON/OFF control: When setting proportional band to 0.00 or 0.0. | | |
| | EVT☐ proportional band | pH input | pH 0.00 to 14.00 (*) |
| | | Temperature input | 0.0 to 100.0℃ (*) |
| | EVT☐ proportional cycle | | 1 to 300 seconds |

| | Cleansing Output | **Cleansing output mode**<br>If $cLEG$ (Cleansing output) is selected in any of [EVT1 to EVT4 types (pp. 25 to 27)], the unit will enter Cleansing Output Mode.<br>An EVT output (for which Cleansing output is selected) will turn ON during the configured cleansing time.<br>When the cleansing interval finishes after restore time has passed, this is counted as one cleansing cycle, and the configured number of cleansing cycles will be repeated.<br>While cleansing is being performed, other outputs are in OFF status.<br>Measured values (pH, temperature) are retained.<br>Programmed action will be performed, except during cleansing action.<br>When power is turned ON again, starts from the 1st cleansing action again.<br>After the configured number of cleansing cycles is finished, the EVT output (for which the cleansing output is selected) is turned OFF, and other outputs perform their programmed operations, however, they are in Cleansing Output Mode. |
| | | **Manual cleansing mode**<br>By pressing the △ and ▽ keys simultaneously for 3 seconds, the unit enters Manual cleansing mode.<br>In Manual cleansing mode, cleansing action is performed using 'Cleansing time' and 'Restore time after cleansing'.<br>After manual cleansing action is finished, the unit automatically returns to the Cleansing Output Mode.<br>During cleansing action, Manual cleansing mode via key operation is invalidated, and the unit cannot enter Manual cleansing mode.<br>During Manual cleansing mode, if programmed cleansing action initiates after restore time has passed, the programmed cleansing action will not be performed in the current session. |
| | pH Input Error Alarm | Detects actuator trouble.<br>Even if pH input error alarm time has elapsed, and if pH input does not become higher than pH input error alarm band, the unit assumes that actuator trouble has occurred, and sets Status flag 2 (EVT1, EVT2, EVT3, EVT4 output flag bit).<br>In Serial communication, status can be read by reading Status flag 2 (EVT1, EVT2, EVT3, EVT4 output flag bit).<br>If $EPUL$ (pH input error alarm output) is selected in [EVT1 type (pp.25 to 27)], EVT1 output is turned ON.<br>The same applies to EVT2, EVT3 and EVT4.<br><br>pH input error alarm is disabled in the following cases:<br>• During pH calibration<br>• When $cLEG$ (Cleansing output) is selected in any of EVT1 to EVT4 types (pp.25 to 27), and when cleansing action is performed using the 'Cleansing time' and 'Restore time after cleansing'.<br>• When pH input error alarm time is set to 0 seconds (or minutes) or pH input error alarm band is set to pH 0.0. |

| | Cycle Automatic Variable Function | If deviation between EVT☐ value and measured value enters EVT☐ cycle variable range, the proportional cycle will be automatically extended in accordance with the deviation. Proportional action OFF time will be extended, and ON/OFF ratio will be adjusted.<br>However, if EVT☐ cycle extended time is set to 0 (zero) seconds, this function will be disabled. |
|---|---|---|

### Insulation, Dielectric Strength
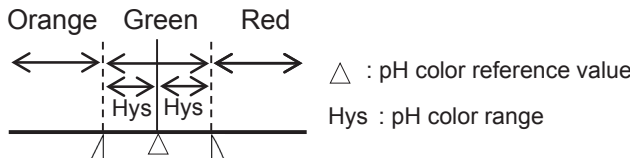

| Circuit Insulation Configuration | <br>Insulation resistance: 10 MΩ or more, at 500 V DC |
|---|---|
| Dielectric Strength | Power terminal - ground (GND): 1.5 kV AC for 1 minute<br>Input terminal - ground (GND):    1.5 kV AC for 1 minute<br>Input terminal - power terminal:  1.5 kV AC for 1 minute |

### Attached Functions

| Set Value Lock | Lock 1: None of the set values can be changed.<br>Lock 2: Only EVT1, EVT2, EVT3 and EVT4 values can be changed.<br>Lock 3: All set values – except Electrode RTD, Temperature calibration value, pH calibration value, pH calibration Auto/Manual, Transmission output 1 Zero and Span adjustment values, Transmission output 2 Zero and Span adjustment values – can be temporarily changed.<br>However, they revert to their previous value after the power is turned off because they are not saved in the non-volatile IC memory. |
|---|---|
| pH Input Sensor Correction | This corrects the input value from the pH Combined Electrode Sensor. When sensor-measured pH may deviate from the pH in the measured location, desired pH can be obtained by adding a sensor correction value.<br>However, it is effective within the measurement range regardless of the sensor correction value. |
| Temperature Display when No Temperature Compensation | If $NoNE$ (No temperature compensation) is selected in [Electrode RTD (p.24)], the item to be indicated on the Temperature Display can be selected. |
| Cable Length Correction | If $2WI RE$ (2-wire type) is selected in [Pt100 input wire type (p.24)], and if sensor cable is too long, temperature measurement error will occur due to cable resistance. This can be corrected by setting the cable length correction value and cable cross-section area. |

| | |
|---|---|
| Outside Measurement Range | When pH measured value or temperature measured value is outside the measurement range, the following will be indicated. However, when pH measured value is outside the measurement range, and if the unit proceeds to pH Calibration mode, the pH Display will be unlit, and the Temperature Display will flash $oF\square\square\square$.<br>When temperature errors occur, and if the unit proceeds to pH Manual Calibration mode, the pH Display will be unlit, and the Temperature Display will flash an error code.<br><br>pH measured value is outside the measurement range:<br>  If the value is less than pH 0.00, or exceeds pH 14.00, the following will be indicated.<br>• When $NoNE\square$ (No temperature compensation) is selected in [Electrode RTD (p.24)]: |

| pH Display | Temperature Display |
|---|---|
| Less than pH 0.00: 0.00 | $oF\square\square\square$ is flashing. |
| Exceeding pH 14.00: 14.00 | $oF\square\square\square$ is flashing. |

• Pt spec: When $Pr\ 10\square$ (Pt1000) or $Pr\ 1\square\square$ (Pt100) is selected in [Electrode RTD (p.24)]
• Cu spec: When $cU5\square\square$ (Cu500) is selected in [Electrode RTD (p.24)]:

| pH Display | Temperature Display |
|---|---|
| Less than pH 0.00: 0.00 is flashing. | Temperature measured value |
| Exceeding pH 14.00: 14.00 is flashing. | Temperature measured value |

• When temperature measured value is outside the measurement range (less than 0.0℃ or exceeding 110.0℃), the following will be indicated:

| pH Display | Temperature Display |
|---|---|
| pH measured value | Less than 0.0℃: $E\text{-}24\square$ |
| pH measured value | Exceeding 110.0℃: $E\text{-}23\square$ |

| | |
|---|---|
| Power Failure Countermeasure | The setting data is backed up in the non-volatile IC memory. |
| Self-diagnosis | The CPU is monitored by a watchdog timer, and if an abnormal status occurs, the AER-102-PH is switched to warm-up status. |
| Bar Graph Indication | When $rRor\ 1$ (Transmission output 1) or $rRor\ 2$ (Transmission output 2) is selected in [Bar graph indication (p.39], segments light in accordance with the output.<br>Scale is -5 to 105%. Segments light from left to the right in accordance with the output.<br>(e.g.) When the output is 50% |

■■■■■■■■■■■□□□□□□□□□□□
 □                        □                        □
-5%              50%             105%

Light from left to right in accordance with the output.

| Warm-up Indication | For approx. 4 seconds after the power is switched ON, the characters below are indicated on the pH Display and Temperature Display.<br>Indication on the Temperature Display differs depending on the input specification as follows. |
|---|---|

**Pt spec**

| pH Display | Temperature Display | Item selected in [Electrode RTD (p.24)] | Item selected in [Pt100 input wire type (p.24)] |
|---|---|---|---|
| PH□□□ | Unlit | NoNE□: No temperature compensation | |
| | Pr 100 | Pr 100: Pt1000 | |
| | Pr□2□ | Pr 1□□: Pt100 | 2WI RE : 2-wire type |
| | Pr□3□ | | 3WI RE : 3-wire type |

**Cu spec**

| pH Display | Temperature Display | Item selected in [Electrode RTD (p.24)] |
|---|---|---|
| PH□□□ | Unlit | NoNE□ : No temperature compensation |
| | cU5□□ | cU5□□: Cu500 |

| pH Color Selection | Selects pH Display color. |
|---|---|

| Item selected in [pH Color (p.38)] | pH Display Color |
|---|---|
| GRN□□ | Green |
| REd□□ | Red |
| oRG□□ | Orange |
| PHGR□ | pH color changes continuously. |

**pH color changes continuously:**
pH Display color changes according to [pH color reference value (p.38)] and [pH color range (p.38)] settings.
• When pH is lower than [pH color reference value] – [pH color range]: Orange
• When pH is within [pH color reference value] ± [pH color range]: Green
• When pH is higher than [pH color reference value] + [pH color range]: Red

Orange   Green   Red

△ : pH color reference value

Hys : pH color range

| Zero Indication | Indicates potential difference when pH 7 is calibrated. However, if Manual calibration is performed, zero indication value calculated at previous automatic calculation will not be updated.<br>If calibration is not successfully completed, zero indication will show the value before calibration. |
|---|---|
| Slope Indication | From the voltage equivalent to the calibrated pH, electro-motive force for the change of pH 1 will be indicated.<br>If calibration is not successfully completed, slope indication will show the value before calibration. |

| Error Code | | | Error codes below flash on the Temperature Display. | |
|---|---|---|---|---|
| **Error Code** | **Error Type** | **Error Contents** | **Description** | **Occur-rence** |
| E-11 | Error | Response Speed Error | When calibrating, the response of the pH Combined Electrode Sensor is slow. When the difference between the input and each of the 1st and 2nd solutions are within pH ±1.50, and input fluctuation is over pH ±0.05 (in 10 seconds of assessment cycles) for 5 minutes, this is assumed to be an error. However, if input fluctuation is less than or equal to pH ±0.05, this is assumed to be within the normal range. | When calibrat-ing |
| E-12 | Error | Electrode Sensitivity Error | When calibrating, sensitivity of the pH Combined Electrode Sensor has deteriorated. The difference between 1st and 2nd standard solution value after calibration is less than or equal to pH 2.00. | |
| E-13 | Error | Asymmetry Potential Error | When calibrating pH 7, the difference in electromotive force between the sensor-measured value and standard value exceeds the equivalent of pH ±1.50. | |
| E-14 | Error | Standard Solution Error | The specified standard solution has not been used. When pH ±1.50 is exceeded for the 1st and 2nd solutions. | |
| E-15 | Error | Solution temp. Error | When temperature is 55℃ or more at pH 10 solution. | |
| E-21 | Fail | Temp. Sensor Burnout | Temperature sensor lead wire is burnt out. | When measur-ing or calibrat-ing |
| E-22 | Fail | Temp. Sensor Short-circuited | Temperature sensor lead wire is short-circuited. | |
| E-23 | Error | Outside Temp. Compen.Range | Measured temperature has exceeded 110.0℃. | |
| E-24 | Error | Outside Temp. Compen.Range | Measured temperature is less than 0.0℃. | |

(Abbreviations: Temp.: Temperature,   Compen.: Compensation)

**Other**

| | |
|---|---|
| Power Consumption | Approx. 12 VA |
| Ambient Temperature | 0 to 50℃ (32 to 122℉) |
| Ambient Humidity | 35 to 85 %RH (Non-condensing) |
| Weight | Approx. 280 g |
| Accessories Included | Unit label: 1 sheet,   Mounting brackets: 1 set Instruction manual: 1 copy When Serial communication (C5 option) is ordered: Wire harness C5J (0.2 m): 1 length Wire harness C0J (3 m): 1 length When EVT3, EVT4 outputs (Contact output 3, 4) (EVT3 option) are/is ordered: Wire harness HBJ (3 m): 2 lengths |
| Accessories Sold Separately | Terminal cover |

## 10.2 Optional Specifications

### Serial Communication (Option code: C5)

| Serial Communication | The following operations can be carried out from an external computer. (1) Reading and setting of various set values (2) Reading of the pH, temperature and status (3) Function change, adjustment (4) Reading and setting of user save area | | | |
|---|---|---|---|---|
| | Cable Length | 1.2 km (Max), Cable resistance: Within 50 Ω (Terminators are not necessary, but if used, use 120 Ω minimum on one side.) | | |
| | Communication Line | EIA RS-485 | | |
| | Communication Method | Half-duplex communication | | |
| | Communication Speed | 9600, 19200, 38400 bps (Selectable by keypad) | | |
| | Synchronization Method | Start-stop synchronization | | |
| | Code Form | ASCII, Binary | | |
| | Communication Protocol | Shinko protocol, MODBUS ASCII, MODBUS RTU (Selectable by keypad) | | |
| | Data Bit/Parity | 8 bits/No parity, 7 bits/No parity, 8 bits/Even, 7 bits/Even, 8 bits/Odd, 7 bits/Odd (Selectable by keypad) | | |
| | Stop Bit | 1 bit, 2 bits (Selectable by keypad) | | |
| | Error Correction | Command request repeat system | | |
| | Error Detection | Parity check, Checksum (Shinko protocol), LRC (MODBUS protocol ASCII), CRC-16 (MODBUS protocol RTU) | | |
| | Data Format | **Communication Protocol** | **Shinko Protocol** | **MODBUS ASCII** | **MODBUS RTU** |
| | | Start bit | 1 | 1 | 1 |
| | | Data bit | 7 | 7 (8) Selectable | 8 |
| | | Parity | Even | Even (No parity, Odd) Selectable | No parity (Even, Odd) Selectable |
| | | Stop bit | 1 | 1 (2) Selectable | 1 (2) Selectable |

### EVT3, EVT4 Outputs (Contact output 3, 4) (Option code: EVT3)

| EVT3, EVT4 Outputs (Contact output 3, 4) | Same as EVT output (pp.61 to 63) |
|---|---|

**Transmission Output 2 (Option Code: TA2)**

| | | |
|---|---|---|
| Transmission Output 2 | Converting pH, temperature or MV to analog signal every input sampling period, and outputs the value in current.<br>If $\mathsf{none}$ (No temperature compensation) is selected in [Electrode RTD (p.24)], and if $\mathsf{TEnP}$ (Temperature transmission) is selected in [Transmission output 2 type (p.36)], the value set in [Reference temperature (p.24)] will be output.<br>If Transmission output 2 high limit and low limit are set to the same value, Transmission output 2 will be fixed at 4 mA DC. | |
| | Resolution | 12000 |
| | Current | 4 to 20 mA DC<br>(Load resistance: Max 550 Ω) |
| | Output accuracy | Within ±0.3% of Transmission output 2 Span |
| Transmission Output 2 Adjustment | Fine adjustment of Transmission output 2 can be performed via Transmission output 2 Zero adjustment and Span adjustment. | |
| Transmission Output 2 Status when Calibrating | Transmission output 2 status can be selected when calibrating pH.<br>Last value HOLD: Retains the last value before pH calibration, and outputs it.<br>Set value HOLD: Outputs the value set in [Transmission output 2 value HOLD when calibrating].<br>Measured value: Outputs the measured value when calibrating pH. | |

# 11. Troubleshooting

If any malfunction occurs, refer to the following items after checking that power is being supplied to the AER-102-PH.

## 11.1 Indication

| Problem | Possible Cause | Solution |
|---|---|---|
| The pH/ Temperature Displays are unlit. | The time set in [Backlight time (p.38)] has passed. | If any key is pressed while displays are unlit, it will re-light. Set the backlight time to a suitable time-frame. |
| Indication of the pH/Temperature Display is unstable or irregular. | pH calibration and temperature calibration may not have finished. | Perform pH calibration and temperature calibration. |
| | Electrode RTD selection might not be correct. | Select a correct electrode RTD. |
| | Specification of pH Combined Electrode Sensor may not be suitable. | Replace the sensor with a suitable one. |
| | There may be equipment that interferes with or makes noise near the AER-102-PH. | Keep AER-102-PH clear of any potentially disruptive equipment. |

| Problem | Possible Cause | Solution |
|---|---|---|
| The Temperature Display is unlit. | $oFF$ (Unlit) is selected in [Temperature Display when no temperature compensation (p.39)]. | Select $5rd$ (Reference temperature). |
| [$E-11$] is flashing on the Temperature Display. | This shows that the response of the pH Combined Electrode Sensor is slow when calibrating. | Rinse the pH Combined Electrode Sensor. If [$E-11$] is still flashing, check if the standard solution and pH Combined Electrode Sensor are normal. If they are not normal, replace the solution or the sensor. |
| [$E-12$] is flashing on the Temperature Display. | When calibrating, this occurs when the pH Combined Electrode Sensor has deteriorated. | Rinse the pH Combined Electrode Sensor, and refill the internal solution. If [$E-12$] is still flashing, replace the sensor. |
| [$E-13$] is flashing on the Temperature Display. | When calibrating, this occurs when electromotive force (asymmetry potential) of pH 7 is large. | Rinse the pH Combined Electrode Sensor, and refill the internal solution. If [$E-13$] is still flashing, replace the sensor. |
| [$E-14$] is flashing on the Temperature Display. | When calibrating, this will occur if the specified standard solution is not used. | Rinse the pH Combined Electrode Sensor, and refill the internal solution. If [$E-14$] is still flashing, use the specified standard solution. |
| [$E-15$] is flashing on the Temperature Display. | When calibrating, this will occur if temperature of pH 10 is 55℃ or more. | Check the liquid temperature of pH 10. |
| [$E-21$] is flashing on the Temperature Display. | This occurs when the temperature sensor lead wire is burnt out. | Replace the pH Combined Electrode Sensor. |
| [$E-22$] is flashing on the Temperature Display. | This occurs when the temperature sensor lead wire is short-circuited. | Replace the pH Combined Electrode Sensor. |
| [$E-23$] is flashing on the Temperature Display. | This occurs when measured temperature value exceeds 110.0℃. | Check the measuring environment. |
| [$E-24$] is flashing on the Temperature Display. | This occurs when measured temperature value is less than 0.0℃. | Check the measuring environment. |
| [$ERR1$] is flashing on the pH Display. | Internal memory is defective. | Contact our agency or us. |

## 11.2 Key Operation

| Problem | Possible Cause | Solution |
|---|---|---|
| • Unable to set values.<br>• The values do not change by $\triangle$, $\triangledown$ keys. | $Lock\ 1$ (Lock 1) or $Lock2$ (Lock 2) is selected in [Set value lock (p.34)].<br>(When Lock 1 or Lock 2 is selected, the LOCK indicator is lit.) | Select ⊟⊟⊟⊟ (Unlock). |
| Unable to enter Manual cleansing mode. | $cLEG$ (Cleansing output) is not selected in any of [EVT1 to EVT4 types (pp. 25 to 27)]. | Select $cLEG$ (Cleansing output) in any of [EVT1 to EVT4 types (pp. 25 to 27)]. |
| | Cleansing action is performing using the 'Cleansing time' and 'Restore time after cleansing' settings. | Execute Manual cleansing after Cleansing action is completed. |
| Unable to enter a calibration mode (pH Calibration mode or Temperature Calibration mode). | $Lock\ 1$ (Lock 1), $Lock2$ (Lock 2) or $Lock3$ (Lock 3) has been selected in [Set value lock (p.34)].<br>(The LOCK indicator is lit when Lock 1, Lock 2 or Lock 3 is selected.) | Select ⊟⊟⊟⊟ (Unlock). |
| | $cLEG$ (Cleansing output) has been selected in any of [EVT1 to EVT4 types (pp. 25 to 27)], and cleansing action is performing using the 'Cleansing Time' and 'Restore Time after Cleansing' settings. | Perform calibration after cleansing action is completed. |

# 12. Character Tables

The following shows our character tables. Use data column for your reference.

## 12.1 Setting Group List

| Character | Setting Group | Reference Section |
|---|---|---|
| F.Nc. 1 | pH input group | 12.7 (p.72) |
| F.Nc.2 | Temperature input group | 12.8 (p.73) |
| EVТo.1 | EVT1 action group | 12.9 (pp.73 to 75) |
| EVТo.2 | EVT2 action group | 12.10 (pp.76 to 78) |
| EVТo.3 | EVT3 action group | 12.11 (pp.78 to 80) |
| EVТo.4 | EVT4 action group | 12.12 (pp.80 to 82) |
| oГ.E.R | Basic function group | 12.13 (pp.83 to 86) |
| Z.R.4.R | Zero/Slope indication group | 12.14 (p.86) |

## 12.2 Temperature Calibration Mode

| Character | Setting Item, Setting Range | Factory Default | Data |
|---|---|---|---|
| ५o (*) <br> 0.0 | **Temperature calibration value** <br> Setting range: -10.0 to 10.0℃ | 0.0℃ | |

(*) ५o and temperature are displayed alternately.

## 12.3 pH Calibration Mode (for Manual calibration)

| Character | Setting Item, Setting Range | Factory Default | Data |
|---|---|---|---|
| ᴄᴀʟ (*) <br> 0.00 | **pH calibration value** <br> Setting range: -7.00 to 7.00 | 0.00 | |

(*) ᴄᴀʟ and pH are displayed alternately.

## 12.4 Transmission Output 1 Adjustment Mode

| Character | Setting Item, Setting Range | Factory Default | Data |
|---|---|---|---|
| AJZ 1 <br> 0.00 | **Transmission output 1 Zero adjustment value** <br> Setting range: ±5.00% of Transmission output 1 span | 0.00% | |
| AJ५ 1 <br> 0.00 | **Transmission output 1 Span adjustment value** <br> Setting range: ±5.00% of Transmission output 1 span | 0.00% | |

## 12.5 Transmission Output 2 Adjustment Mode

| Character | Setting Item, Setting Range | Factory Default | Data |
|---|---|---|---|
| AJZ2 <br> 0.00 | **Transmission output 2 Zero adjustment value** <br> Setting range: ±5.00% of Transmission output 2 span | 0.00% | |
| AJ५2 <br> 0.00 | **Transmission output 2 Span adjustment value** <br> Setting range: ±5.00% of Transmission output 2 span | 0.00% | |

## 12.6 Simple Setting Mode

| Character | Setting Item, Setting Range | Factory Default | Data |
|---|---|---|---|
| E५५ I□ <br> □□0.00 | **EVT1 value** <br><br> pH input: pH 0.00 to 14.00 <br> Temperature input: 0.0 to 100.0℃ | pH input: pH 0.00 <br> Temperature input: 0.0℃ | |
| E५५2□ <br> □□0.00 | **EVT2 value** <br><br> pH input: pH 0.00 to 14.00 <br> Temperature input: 0.0 to 100.0℃ | pH input: pH 0.00 <br> Temperature input: 0.0℃ | |
| E५५3□ <br> □□0.00 | **EVT3 value** <br><br> pH input: pH 0.00 to 14.00 <br> Temperature input: 0.0 to 100.0℃ | pH input: pH 0.00 <br> Temperature input: 0.0℃ | |
| E५५4□ <br> □□0.00 | **EVT4 value** <br><br> pH input: pH 0.00 to 14.00 <br> Temperature input: 0.0 to 100.0℃ | pH input: pH 0.00 <br> Temperature input: 0.0℃ | |

## 12.7 pH Input Group

| Character | Setting Item, Setting Range | Factory Default | Data |
|---|---|---|---|
| ᴦ YPE□ <br> JI ५□□ | **pH 7 calibration standard** <br> JI ५□□ : JIS <br> U५□□□ : US standard | JIS | |
| ५EPH□ <br> PH4□ | **2nd solution** <br> PH2□□ : pH 2 <br> PH4□□ : pH 4 <br> PH9□□ : pH 9 <br> PH 10□ : pH 10 | pH 4 | |
| AJ५ᴦ□ <br> AUᴦo□ | **pH calibration Auto/Manual** <br> AUᴦo□ : Automatic <br> MANU□ : Manual | Automatic | |
| dP I□□ <br> □□0.00 | **Decimal point place** <br> □□□□0 : No decimal point <br> □□□0.0 : 1 digit after decimal point <br> □□0.00 : 2 digits after decimal point | 2 digits after decimal point | |
| FI Lᴦ□ <br> □□□0.0 | **pH input filter time constant** <br> Setting range: 0.0 to 60.0 seconds | 0.0 seconds | |
| P५o□ <br> □□0.00 | **pH input sensor correction** <br> Setting range: -1.40 to 1.40 | 0.00 | |
| dFcᴦ□ <br> □□□20 | **pH inputs for moving average** <br> Setting range: 1 to 120 | 20 | |

72

### 12.8 Temperature Input Group

| Character | Setting Item, Setting Range | Factory Default | Data |
|---|---|---|---|
| 5EN5<br>Pʳ 100 | **Electrode RTD**<br><br>**Pt spec**<br>  NoNE : No temperature compensation<br>  Pʳ 100 : Pt1000<br>  Pʳ 1 : Pt100<br>**Cu spec**<br>  NoNE : No temperature compensation<br>  cU5 : Cu500 | Pt spec: Pt1000<br>Cu spec: Cu500 | |
| 5ʳNd<br>25.0 | **Reference temperature**<br> Setting range: 5.0 to 95.0℃ | 25.0℃ | |

### 12.14 Zero/Slope Indication Group

| Character | Setting Item, Indication Range | Factory Default | Data |
|---|---|---|---|
| ZERo□ □□□0.0 | **Zero indication** <br> Indication range: Voltage equivalent to pH ±1.5 | 0.0 mV | |
| 5LoP□ □□59.2 | **Slope indication** <br> Indication range: Voltage equivalent to pH 0.00 to 14.00 | 59.2 mV | |

## 12.15 Error Code List

If any error occurs, its error code will flash on the Temperature Display.

| Error Code | Error Type | Error Contents | Description | Occurrence |
|---|---|---|---|---|
| E⁻11 | Error | Response Speed Error | When calibrating, the response of the pH Combined Electrode Sensor is slow. When the difference between the input and each of the 1st and 2nd solutions are within pH ±1.50, and input fluctuation is over pH ±0.05 (in 10 seconds of assessment cycles) for 5 minutes, this is assumed to be an error. However, if input fluctuation is less than or equal to pH ±0.05, this is assumed to be within the normal range. | When calibrating |
| E⁻12 | Error | Electrode Sensitivity Error | When calibrating, sensitivity of the pH Combined Electrode Sensor has deteriorated. The difference between 1st and 2nd standard solution value after calibration is less than or equal to pH 2.00. | When calibrating |
| E⁻13 | Error | Asymmetry Potential Error | When calibrating pH 7, the difference in electromotive force between the sensor-measured value and standard value exceeds the equivalent of pH ±1.50. | When calibrating |
| E⁻14 | Error | Standard Solution Error | The specified standard solution has not been used. When pH ±1.50 is exceeded for the 1st and 2nd solutions. | When calibrating |
| E⁻15 | Error | Solution Temperature Error | When temperature is 55℃ or more at pH 10 solution. | When calibrating |
| E⁻21 | Fail | Temp. Sensor Burnout | Temperature sensor lead wire is burnt out. | When measuring or calibrating |
| E⁻22 | Fail | Temp. Sensor Short-circuited | Temperature sensor lead wire is short-circuited. | When measuring or calibrating |
| E⁻23 | Error | Outside Temp. Compensation Range | Measured temperature has exceeded 110.0℃. | When measuring or calibrating |
| E⁻24 | Error | Outside Temp. Compensation Range | Measured temperature is less than 0.0℃. | When measuring or calibrating |

(Abbreviation: Temp: Temperature)

***** Inquiries *****

For any inquiries about this unit, please contact our agency or the
vendor where you purchased the unit after checking the following.

    [Example]
    • Model   ----------------------------  AER-102-PH
    • Serial number   -----------------  No. 195F05000

In addition to the above, please let us know the details of the
malfunction, or discrepancy, and the operating conditions.
