Attached functions

Auto-light function: Display brightness is controlled in accordance with the surrounding area. Unnecessary brightness is reduced, saving energy.

Power failure countermeasure: The data is backed up in nonvolatile IC memory.

Self diagnosis: The CPU is monitored by a watchdog timer, and when an abnormal status is found on the CPU, the unit is switched to warm-up status with tuning all outputs off.

■ Environmental specification

RoHS directive compliance

Settings

Function keys

- (1) UP Key: Increases the numeric value.
- (2) DOWN Key: Decrease the numeric value.
- (3) MODE Key: Selects the setting mode.
- (4) SUB-MODE Key: Turns the displays ON again when they are in OFF status.

(The UP, DOWN or MODE Key also turns the displays ON again when they are in OFF status.)

■ Displays and indicators

Input display: Indicates the input value

Indication of -2000 or less (for DC input):

The minus (-) sign and input value light alternately. Indication of 10000 or more:

The lower 4 digits flash.

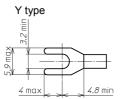

" flashes on the Input display. Under range: '

" flashes on the Input display. Over range: "

Warm-up indication: For approx. 3sec. after the power to the instrument is turned on, the input type is indicated on the input display, and Output

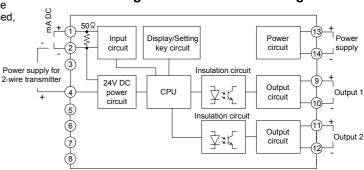

type is indicated on the Output display. Output display: Indicates output volume in percentage (%) form. Power indicator: The green LED lights when the power to the instrument is turned on.
